- 8* Consolidated Statement of Recognised Income and Expense for the Year Ended 31 December 2006
- 9* Consolidated Cash Flow Statement for the Year Ended 31 December 2006
- 10* Notes on the Financial Statements
- 78* HSBC Bank Middle East Limited and Other Group Offices in the Region

### Presentation of Information

---

This document comprises the Annual Report and Accounts 2006 for HSBC Bank Middle East Limited and its subsidiary undertakings (together the 'group'). It contains the Directors' Report and Accounts, together with the Auditors' report, as required by the Companies (Jersey) Law 1991.

## Notice of the Annual General Meeting

---

Notice is hereby given that the One-Hundred-and-Seventeenth Annual General Meeting of HSBC Bank Middle East Limited will be held at HSBC House, Esplanade, St Helier, Jersey, Channel Islands on Wednesday 11 April 2007 at 9.00 a.m. to transact the following ordinary business:

- 1 to receive and consider the Annual Accounts and the Reports of the Directors and of the Auditors for the year ended 31 December 2006;
- 2 to appoint Auditors and to fix their remuneration.

By Order of the Board  
M J Seguss, *Secretary*  
Jersey

28 February 2007

*Notes:*

- 1 *By virtue of Article 13.6 of the Articles of Association, on a poll, votes may be given either personally, or by proxy.*
- 2 *By virtue of Article 13.8 of the Articles of Association, any instrument appointing a proxy shall be deposited at the Head Office of HSBC Bank Middle East Limited, or at such other place specified for that purpose in the notice of the meeting or an instrument of proxy issued by HSBC Bank Middle East Limited, before the time appointed for holding the meeting.*
- 3 *By virtue of Article 13.7 of the Articles of Association, any instrument appointing a proxy may be in any usual form, or as approved by the Directors.*
- 4 *By virtue of Article 14 of the Articles of Association, any corporation that is a Member of HSBC Bank Middle East Limited may, by Resolution of its Directors or other governing body, authorise such person as it thinks fit to act as its representative at any meeting of HSBC Bank Middle East Limited.*

## Report of the Directors

---

### Board of Directors

---

D H Hodgkinson, <i>Chairman</i>	M M Hussain
N S K Booker, <i>Deputy Chairman</i>	C J M Keirle
J B Blanthorne	C M Meares
J E Coverdale	J C Tibbo
Abdel Salam El Anwar	

The present Directors of HSBC Bank Middle East Limited are listed above.

During the year, S K Green resigned as a Director and as Chairman with effect from 24 July 2006, and D H Hodgkinson resigned as Deputy Chairman with effect from 19 May 2006 and was appointed Chairman with effect from 24 July 2006. N S K Booker was appointed as a Director and as Deputy Chairman with effect from 19 May 2006.

Also during the year, E P Carton resigned as a director with effect from 08 March 2006, R F Stock resigned as a Director with effect from 24 July 2006, J B Blanthorne was appointed as a director with effect from 20 August 2006, and I A Khan resigned as a Director with effect from 14 November 2006.

### Principal activities

---

The group, through its branch network and subsidiary undertakings, provides a range of banking and related financial services in the Middle East. There has been no significant change in this activity.

### Profit and dividends

---

The consolidated profit for the year attributable to the shareholders of the bank was US\$469,484 thousand, and has been dealt with as set out in the Consolidated Income Statement on page 8.

An interim equity dividend of US\$200,000 thousand was declared and paid during the year. The directors recommend that no further dividend be paid.

### Ordinary share capital

---

On 26 January 2006, the Directors allotted to the Bank's sole shareholder 100,000,000 ordinary shares of US\$1.00 each, fully paid and at par.

### Debt securities and non-equity preference share capital

---

On 14 March 2006, the Directors allotted to the Bank's sole shareholder 100,000 cumulative redeemable preference shares of US\$1.00 each, bearing a mandatory earliest redemption date of 14 March 2016 (deferrable at the request of the ordinary shareholders of the Bank to 10-yearly intervals thereafter), but redeemable at the option of the Bank on any date after 14 March 2011, fully paid and at a premium of US\$999.00 per share, and 150,000 cumulative redeemable preference shares of US\$1.00 each, bearing no mandatory redemption date but redeemable at the option of the Bank on any date after 14 March 2011, fully paid and at a premium of US\$999.00 per share.

On 12 April 2006, the authorised non-equity preference share capital of the bank was increased from 750,000 cumulative redeemable preference shares of US\$1.00 each to 1,250,000 cumulative redeemable preference shares of US\$1.00 each.

On 28 September 2006, the Bank's Debt Issuance Programme, originally established in 2004 and providing for the issue of up to US\$1,000,000,000 in debt securities in the form of medium-term Notes, was extended to provide for the issue of up to US\$3,000,000,000 in debt securities in similar form. On 14 November 2006 the Bank issued a third tranche under the Programme, in the form of US\$1,000,000,000 Floating Rate Notes due 14 November 2011.

## Report of the Directors (continued)

---

### Annual General Meeting

---

The 2007 Annual General Meeting of the Bank will be held on Wednesday 11 April 2007, in accordance with the Notice on page 2.

### Auditors

---

The auditors, KPMG Channel Islands Limited, offer themselves for re-appointment, at fees to be agreed, and a resolution for their re-appointment will be proposed at the forthcoming Annual General Meeting.

On behalf of the Board  
M J Seguss, *Secretary*  
Jersey

28 February 2007

## Statement of Directors' Responsibilities in Relation to the Financial Statements

---

The following statement, which should be read in conjunction with the Auditors' statement of their responsibilities set out in their report on page 5, is made with a view to distinguishing for shareholders the respective responsibilities of the Directors and of the Auditors in relation to the financial statements.

The Directors are responsible for preparing the financial statements in accordance with applicable law and International Financial Reporting Standards.

Company law requires the Directors to prepare financial statements for each financial year which give a true and fair view of the state of affairs of the company and of the profit or loss for that period. In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and apply them consistently;
- make judgments and estimates which are reasonable and prudent;
- state whether applicable accounting standards have been followed, subject to any material departures disclosed and explained in the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the company will continue in business.

The Directors are responsible for keeping proper accounting records that disclose with reasonable accuracy at any time the financial position of the company and enable them to ensure that the financial statements comply with the Companies (Jersey) Law 1991, the Banking Business (Jersey) Law 1991 and the Financial Services (Investment Business (Accounts, Audits and Reports)) (Jersey) Order 2001. They are also responsible for safeguarding the assets of the company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

David Hodgkinson, *Chairman*

## Independent Auditors' Report to the Member of HSBC Bank Middle East Limited

---

We have audited the financial statements of HSBC Bank Middle East Limited for the year ended 31 December 2006 which comprise of the Consolidated Income Statement, the Consolidated Balance Sheet, the Consolidated Cash Flow Statement, the Consolidated Statement of Recognised Income and Expense and the related notes. These financial statements have been prepared under the accounting policies set out therein.

This report is made solely to the company's members, as a body, in accordance with Article 110 of the Companies (Jersey) Law 1991. Our audit work has been undertaken so that we might state to the company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's members as a body, for our audit work, for this report, or for the opinions we have formed.

### Respective responsibilities of directors and auditors

---

As described in the Statement of Directors' Responsibilities on page 5, the company's Directors are responsible for preparation of the financial statements in accordance with applicable law and International Financial Reporting Standards.

Our responsibility is to audit the financial statements in accordance with the relevant legal and regulatory requirements and International Standards on Auditing (UK and Ireland).

We report to you our opinion as to whether the financial statements give a true and fair view and are properly prepared in accordance with the Companies (Jersey) Law 1991, the Banking Business (Jersey) Law 1991 and the Financial Services (Investment Business (Accounts, Audits and Reports)) (Jersey) Order 2001. We also report to you if, in our opinion, the company has not kept proper accounting records or if we have not received all the information and explanations we require for our audit.

We read the Directors' Report accompanying the financial statements and consider the implications for our report if we become aware of any apparent misstatements within it.

### Basis of audit opinion

---

We conducted our audit in accordance with International Standards on Auditing (UK and Ireland) issued by the Auditing Practices Board. An audit includes examination, on a test basis, of evidence relevant to the amounts and disclosures in the financial statements. It also includes an assessment of the significant estimates and judgements made by the directors in the preparation of the financial statements, and of whether the accounting policies are appropriate to the company's circumstances, consistently applied and adequately disclosed.

We planned and performed our audit so as to obtain all the information and explanations which we considered necessary in order to provide us with sufficient evidence to give reasonable assurance that the financial statements are free from material misstatement, whether caused by fraud or other irregularity or error. In forming our opinion we also evaluated the overall adequacy of the presentation of information in the financial statements.

## Opinion

---

In our opinion the financial statements:

- give a true and fair view, in accordance with International Financial Reporting Standards, of the state of the company's affairs as at 31 December 2006 and of its profit for the year then ended; and
- have been properly prepared in accordance with the Companies (Jersey) Law 1991, the Banking Business (Jersey) Law 1991 and the Financial Services (Investment Business (Accounts, Audits and Reports)) (Jersey) Order 2001.

## Notes on the Financial Statements

### 1 Basis of preparation

#### (a) Compliance with International Financial Reporting Standards

The group has prepared its consolidated financial statements in accordance with International Financial Reporting Standards ('IFRSs') as endorsed by the EU. EU- endorsed IFRSs may differ temporarily from IFRSs as published by the International Accounting Standards Board ('IASB') if new or amended IFRSs have not been endorsed by the EU at the year-end. At 31 December 2006, there were no unendorsed standards affecting the consolidated financial statements, and there was no difference in application to HSBC Bank Middle East Limited between IFRSs endorsed by the EU and IFRSs issued by the IASB.

IFRSs comprise accounting standards issued by the IASB and its predecessor body as well as interpretations issued by the International Financial Reporting Interpretations Committee ('IFRIC') and its predecessor body.

The significant accounting policies applied in the preparation of these financial statements are set out in Note 2 below.

On 1 January 2005, the group adopted IFRS 7 'Financial Instruments: Disclosures', ahead of its effective date, 1 January 2007.

On 1 January 2006, the group adopted the 'Amendments to IAS 39 and IFRS 4 'Financial Guarantee Contracts''. The group retrospectively applied the amendments in accordance with IAS 8 'Accounting Policies, Changes in Accounting Estimates and Errors'. Retrospective adoption of the amendment had no material impact on the consolidated financial statements.

On 1 January 2006, the group adopted IFRIC 7 'Applying the Restatement Approach under IAS 29 Financial Reporting in Hyperinflationary Economies', IFRIC 8 'Scope of IFRS 2' and IFRIC 9 'Reassessment of Embedded Derivatives' ahead of their effective dates. The application of these interpretations had no material impact on the consolidated or separate financial statements.

#### (b) Presentation of information

The presentation of comparative information in Note 5 has been amended following the adoption by the group of the Institute of Chartered Accountants in England and Wales Technical Release 'Tech 04/06 'Disclosure of Auditor Remuneration'.

#### (c) Consolidation

The consolidated financial statements of HSBC Bank Middle East Limited comprise the financial statements of HSBC Bank Middle East Limited and its subsidiaries (together 'the group') made up to 31 December. Entities that are controlled by the group are consolidated until the date that control ceases. Newly acquired subsidiaries are consolidated from the date control is transferred to the group.

In the context of Special Purpose Entities ('SPEs'), the following circumstances may indicate a relationship in which, in substance, the group controls, and consequently consolidates, an SPE:

- the activities of the SPE are being conducted on behalf of the group according to its specific business needs so that the group obtains benefits from the SPE's operation;
- the group has the decision-making powers to obtain the majority of the benefits of the activities of the SPE or, by setting up an 'autopilot' mechanism, the group has delegated these decision-making powers;
- the group has the rights to obtain the majority of benefits of the SPE and therefore may be exposed to risks incident to the activities of the SPE; or
- the group retains the majority of the residual or ownership risks related to the SPE or its assets in order to obtain benefits from its activities.

The purchase method of accounting is used to account for the acquisition of subsidiaries by the group. The cost of an acquisition is measured at the fair value of the consideration given at the date of exchange, together with costs directly attributable to that acquisition. The acquired identifiable assets, liabilities and contingent liabilities are measured at their fair values at the date of acquisition. Any excess of the cost of acquisition over the fair value of the group's share of the identifiable assets, liabilities and contingent liabilities acquired is recorded as goodwill. If the cost of acquisition is less than the fair value of the group's share of the identifiable assets, liabilities and contingent liabilities of the business acquired, the difference is recognised immediately in the income statement.

All intra-group transactions are eliminated on consolidation.

The consolidated financial statements of the group also include the attributable share of the results and reserves of associates. These are based on financial statements made up to 31 December.

#### (d) Future accounting developments

At 31 December 2006, the group had adopted all IFRSs and Interpretations that had been issued by the IASB and IFRIC, and endorsed by the EU. There are currently no IFRSs or interpretations that have been issued by the IASB and endorsed by the EU which become effective after 31 December 2006 that have not already been adopted by HSBC.

##### *Standards and interpretations issued by the IASB but not endorsed by the EU*

IFRS 8 'Operating Segments', which replaces IAS 14 'Segment Reporting', was issued on 30 November 2006 and is effective for annual periods beginning on or after 1 January 2009. This standard specifies how an entity should report information about its operating segments, based on information about the components of the entity that management uses to make operating decisions. It is anticipated that this standard will be adopted with effect from 1 January 2009, and will have an impact on the group. However, IFRS 8 will only affect reporting of financial and descriptive information about its reportable segments in the financial statements at the reporting date.

IFRIC 10 'Interim Financial Reporting and Impairment' was issued on 20 July 2006 and is effective for annual periods beginning on or after 1 November 2006. IFRIC 10 states that any impairment losses recognised in an interim financial statement in respect of goodwill under IAS 36 'Impairment of Assets', or certain financial assets under IAS 39 'Financial Instruments: Recognition & Measurement' must not be reversed in subsequent interim or annual financial statements. The group will adopt IFRIC 10 from 1 January 2007. Adoption of this interpretation is not expected to have a significant impact on the group.

IFRIC 11 'Group and Treasury Share Transactions' was issued on 2 November 2006 and is effective for annual periods beginning on or after 1 March 2007. IFRIC 11 requires a share-based payment arrangement in which an entity receives goods or services as consideration for its own equity instruments to be accounted for as an equity-settled share-based payment transaction, regardless of how the equity instruments required are obtained. The Interpretation also provides guidance on whether share-based payment arrangements in which suppliers of goods or services of an entity are provided with equity instruments of the entity's parent, should be accounted for as cash-settled or equity-settled in the entity's financial statements. The group applies IFRS 2 'Share-based Payment' in the same manner as set out in IFRIC 11, therefore, there will be no impact for the group.

IFRIC 12 'Service Concession Arrangements' ('IFRIC 12') was issued on 30 November 2006 and is effective for annual periods beginning on or after 1 January 2008. IFRIC 12 provides guidance on service concession arrangements by which a government or other public sector entity grants contracts for the supply of public services to the private sector operators. IFRIC 12 addresses how service concession operators should apply existing IFRSs to account for the obligations they undertake and the rights they receive in service concession arrangements. IFRIC 12 is unlikely to have a material effect on the group.

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies

#### (a) Interest income and expense

Interest income and expense for all interest-bearing financial instruments except for those classified as held-for-trading or designated at fair value (other than debt issued by the group and related derivatives) are recognised in 'Interest income' and 'Interest expense' in the income statement using the effective interest method. The effective interest method is a way of calculating the amortised cost of a financial asset or a financial liability (or groups of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period.

The effective interest rate is the rate that exactly discounts estimated future cash receipts or payments earned or paid on a financial asset or financial liability through its expected life or, where appropriate, a shorter period, to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the group estimates cash flows considering all contractual terms of the financial instrument but not future credit losses. The calculation includes all amounts paid or received by the group that are an integral part of the effective interest rate, including transaction costs and all other premiums or discounts.

Interest on impaired financial assets is calculated by applying the original effective interest rate of the financial asset to the carrying amount as reduced by any allowance for impairment.

#### (b) Non interest income

##### *Fee income*

The group earns fee income from a diverse range of services provided to its customers. Fee income is accounted for as follows:

- income earned on the execution of a discrete act is recognised as revenue when the act is completed (for example, fees arising from negotiating, or participating in the negotiation of, a transaction for a third party, such as the arrangement for the acquisition of shares or other securities);
- income earned from the provision of services is recognised as revenue as the services are provided (for example, asset management, portfolio and other management advisory and service fees); and
- income which forms an integral part of the effective interest rate of a financial instrument is recognised as an adjustment to the effective interest rate (for example, certain loan commitment fees) and recorded in 'Interest income' (Note 2(a)).

##### *Dividend income*

Dividend income is recognised when the right to receive payment is established. This is the ex-dividend date for equity securities.

##### *Net income from financial instruments designated at fair value*

'Net income from financial instruments designated at fair value' includes all gains and losses from changes in the fair value of financial assets and financial liabilities designated at fair value through profit or loss. Interest income and expense and dividend income arising on those financial instruments are also included, except for debt securities in issue and derivatives managed in conjunction with debt securities in issue. Interest on these instruments is shown in 'Net interest income'.

##### *Trading income*

'Net trading income comprises all gains and losses from changes in the fair value of financial assets and financial liabilities held for trading, together with related interest income, expense and dividends.

## 2 Summary of significant accounting policies (continued)

### (c) Segment reporting

The group's main operations are in the UAE, although it also has operations elsewhere in the Middle East, and manages its business through four customer groups: Personal Financial Services; Commercial Banking; Corporate Investment Banking and Markets; and Private Banking. Segment income and expenses include transfers between geographical regions and transfers between customer group segments. These transfers are conducted at arm's length.

### (d) Determination of fair value

All financial instruments are recognised initially at fair value. The fair value of a financial instrument on initial recognition is normally the transaction price, i.e. the fair value of the consideration given or received. In certain circumstances, however, the initial fair value may be based on other observable current market transactions in the same instrument, without modification or repackaging, or on a valuation technique whose variables include only data from observable markets.

Subsequent to initial recognition, the fair values of financial instruments measured at fair value that are quoted in active markets are based on bid prices for assets held or liabilities to be issued and offer prices for assets to be acquired or liabilities held at the time. When independent prices are not available, fair values are determined by using valuation techniques which refer to observable market data. These include comparison with similar instruments where market observable prices exist, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants.

For certain derivatives, fair values may be determined in whole or in part using valuation techniques based on assumptions that are not supported by prices from current market transactions or observable market data.

A number of factors such as bid-offer spread, credit profile and model uncertainty are taken into account, as appropriate, when values are calculated using valuation techniques.

If the fair value of a financial asset measured at fair value becomes negative, it is recorded as a financial liability until its fair value becomes positive, at which time it is recorded as a financial asset, or it is extinguished.

### (e) Loans and advances to banks and customers

Loans and advances to banks and customers include loans and advances originated by the group which are not intended to be sold in the short term and have not been classified either as held for trading or designated at fair value through profit and loss. Loans and advances are recognised when cash is advanced to borrowers and are derecognised when either borrowers repay their obligations, or the loans are sold or written off. They are initially recorded at fair value plus any directly attributable transaction costs and are subsequently measured at amortised cost using the effective interest method, less impairment losses.

### (f) Loan impairment

Losses for impaired loans are recognised promptly when there is objective evidence that impairment of a loan or portfolio of loans has occurred. Impairment losses are calculated on individual loans and on loans assessed collectively. Losses expected from future events, no matter how likely, are not recognised.

#### (i) Individually assessed loans

At each balance sheet date, the group assesses on a case-by-case basis whether there is any objective evidence that a loan is impaired. This procedure is applied to all accounts that are considered individually significant. In determining impairment losses on these loans, the following factors are considered:

- the group's aggregate exposure to the customer;
- the viability of the customer's business model and capability to trade successfully out of financial difficulties and generate sufficient cash flow to service its debt obligations;

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies (continued)

- the amount and timing of expected receipts and recoveries;
- the likely dividend available on liquidation or bankruptcy;
- the extent of other creditors' commitments ranking ahead of, or pari passu with, the group and the likelihood of other creditors continuing to support the company;
- the complexity of determining the aggregate amount and ranking of all creditor claims and the extent to which legal and insurance uncertainties are evident;
- the realisable value of security (or other credit mitigants) and likelihood of successful repossession;
- the likely deduction of any costs involved in recovery of amounts outstanding;
- the ability of the borrower to obtain, and make payments in, the currency of the loan if not local currency; and
- where available, the secondary market price for the debt.

Impairment losses are calculated by discounting the expected future cash flows of a loan at its original effective interest rate, and comparing the resultant present value with the loan's current carrying value. Any loss is charged in the income statement. The carrying amount of impaired loans on the balance sheet is reduced through the use of an allowance account.

#### (ii) Collectively assessed loans

Impairment is determined on a collective basis in two different scenarios:

- for loans subject to individual assessment (section (i)), to cover losses which have been incurred but have not yet been identified; and
- for homogeneous groups of loans that are not considered individually significant, where there is objective evidence of impairment.

#### *Incurred but not yet identified impairment*

Individually assessed loans for which no evidence of loss has been identified are grouped together according to their credit risk characteristics for the purpose of calculating an estimated collective loss. This arises from impairment at the balance sheet date which will only be identified in the future.

The collective impairment loss is determined after taking into account:

- historical loss experience in portfolios of similar risk characteristics (for example, by industry sector, loan grade or product);
- the estimated period between impairment occurring and the loss being identified and evidenced by the establishment of an appropriate allowance against the individual loan; and
- management's judgement as to whether current economic and credit conditions are such that the actual level of inherent losses is likely to be greater or less than that suggested by historical experience.

The period between a loss occurring and its identification is estimated by local management for each portfolio grouping.

#### *Homogeneous groups of loans*

For homogeneous groups of loans that are not considered individually significant, two alternative methods are used to calculate allowances on a portfolio basis.

## 2 Summary of significant accounting policies (continued)

- When appropriate empirical information is available, the group utilises roll rate methodology. This methodology employs a statistical analysis of historical trends of the probability of default and the amount of consequential loss, assessed at each time period for which the customer's contractual payments are overdue. The estimated loss is the difference between the present value of expected future cash flows, discounted at the original effective interest rate of the portfolio, and the carrying value of the portfolio. Other historical data and current economic conditions are also evaluated when calculating the appropriate level of allowance required to cover inherent loss. In certain highly developed markets, sophisticated models also take into account behavioural and account management trends as revealed in, for example, bankruptcy and rescheduling statistics.
- In other cases, when the portfolio size is small or when information is insufficient or not sufficiently reliable to adopt a roll rate methodology, the group adopts a formulaic approach which allocates progressively higher loss rates in line with the period of time for which a customer's loan is overdue. Loss rates are based on the discounted expected future cash flows from a portfolio.
- Roll rates, loss rates and the expected timing of future recoveries are regularly benchmarked against actual outcomes to ensure they remain appropriate.

### (iii) Loan write-offs

Loans (and the related impairment allowance accounts) are normally written off, either partially or in full, when there is no realistic prospect of recovery of these amounts and, for collateralised loans, when the proceeds from the realisation of security have been received.

### (iv) Reversals of impairment

If the amount of an impairment loss decreases in a subsequent period, and the decrease can be related objectively to an event occurring after the impairment was recognised, the excess is written back by reducing the loan impairment allowance account accordingly. The reversal is recognised in the income statement.

### (v) Assets acquired in exchange for loans

Non-financial assets acquired in exchange for loans in order to achieve an orderly realisation are recorded as assets held for sale and reported in 'Other assets'. The asset acquired is recorded at the lower of its fair value (less costs to sell) and the carrying amount of the loan (net of impairment allowance) at the date of exchange. No depreciation is provided in respect of assets held for sale. Any subsequent write-down of the acquired asset to fair value less costs to sell is recorded as an impairment loss and included in the income statement. Any subsequent increase in the fair value less costs to sell, to the extent this does not exceed the cumulative impairment loss, is recognised in the income statement.

### (vi) Renegotiated loans

Personal loans, which are generally subject to collective impairment assessment, whose terms have been renegotiated, are no longer considered to be past due or impaired but are treated as new loans only after the minimum required number of payments under the new arrangements have been received.

Loans subject to individual impairment assessment, whose terms have been renegotiated, are subject to ongoing review to determine whether they remain impaired or are considered to be past due.

### (g) Trading assets and trading liabilities

Treasury bills, debt securities, equity shares and short positions in securities are classified as held-for-trading if they have been acquired principally for the purpose of selling or repurchasing in the near term, or they form part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent pattern of short-term profit-taking. These financial assets or financial liabilities are recognised on trade date when the group enters into contractual arrangements with counterparties to purchase or sell securities, and are normally derecognised when either sold (assets) or extinguished (liabilities).

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies (continued)

Measurement is initially at fair value, with transaction costs taken to the income statement. Subsequently, their fair values are remeasured, and all gains and losses from changes therein, are recognised in the income statement in 'Net trading income' as they arise.

#### (h) Financial instruments designated at fair value

Financial instruments, other than those held for trading, are classified in this category if they meet one or more of the criteria set out below, and are so designated by management. The group may designate financial instruments at fair value when the designation:

- eliminates or significantly reduces valuation or recognition inconsistencies that would otherwise arise from measuring financial assets or financial liabilities, or recognising gains and losses on them, on different bases. Under this criterion, the main classes of financial instruments designated by the group are:

*Long-term debt securities* — The interest payable on certain fixed rate long-term debt securities in issue and subordinated liabilities has been matched with receive/pay variable interest rate swaps as part of a documented interest rate risk management strategy. An accounting mismatch would arise if the debt securities in issue were accounted for at amortised cost, because the related derivatives are measured at fair value with movements in the fair value taken through the income statement. By designating the long-term debt at fair value, the movement in the fair value of the long-term debt will be recorded in the income statement.

*Financial assets and financial liabilities under investment contracts* — These are managed on a fair value basis and management information is also prepared on this basis. Liabilities to customers under linked contracts are determined based on the fair value of the assets held in the linked funds, with changes shown in the income statement. Liabilities to customers under other types of investment contracts would be shown at amortised cost. If no designation was made for the assets relating to the customer liabilities they would be reclassified as available-for-sale and the changes in fair value would be recorded directly in equity. Designation at fair value of the financial assets and liabilities under investment contracts allows the fair value movements in fair values to be recorded in the income statements and presented in the same line.

- applies to groups of financial assets, financial liabilities or combinations thereof that are managed, and their performance evaluated, on a fair value basis in accordance with a documented risk management or investment strategy, and where information about the groups of financial instruments is reported to management on that basis. Under this criterion, certain financial assets held to meet liabilities under insurance contracts are the main class of financial instrument so designated. The group has documented risk management and investment strategies designed to manage such assets at fair value, taking into consideration the relationship of assets to liabilities in a way that mitigated market risks. Reports are provided to management on the fair value of the assets. Fair value measurement is also consistent with the regulatory reporting requirements under the appropriate regulations for these insurance operations.
- relates to financial instruments containing one or more embedded derivatives that significantly modify the cash flows resulting from those financial instruments, including certain debt issues and debt securities held.

The fair value designation, once made, is irrevocable. Designated financial assets and financial liabilities are recognised on trade date, when the group enters into contractual arrangements with counterparties to purchase or sell securities, and are normally derecognised when sold (assets) or extinguished (liabilities). Measurement is initially at fair value, with transaction costs taken directly to the income statement. Subsequently, the fair values are remeasured and, except for interest payable on debt securities in issue designated at fair value, gains and losses from changes therein are recognised in 'Net income from financial instruments designated at fair value'.

Gains and losses arising from changes in the fair value of derivatives that are managed in conjunction with designated financial assets or financial liabilities are also included in 'Net income from financial instruments designated at fair value'. Interest on these derivatives is also included in this line, except for interest on derivatives managed with debt securities in issue designated at fair value, which is included in net interest

## 2 Summary of significant accounting policies (continued)

income. The amount of change during the period, and cumulatively, in the fair value of designated financial liabilities and loans and receivables that is attributable to changes in their credit risk, is determined as the amount of change in fair value that is not attributable to changes in market conditions.

### (i) Financial instruments

Treasury bills, debt securities and equity shares intended to be held on a continuing basis, other than those designated at fair value (Note 2(h)), are classified as 'available-for-sale' or 'held-to-maturity'. Financial investments are recognised on trade date, when the group enters into contractual arrangements with counterparties to purchase securities, and are normally derecognised when either the transactions are sold or the borrowers repay their obligations.

- (i) Available-for-sale securities are initially measured at fair value plus direct and incremental transaction costs. They are subsequently remeasured at fair value, and changes therein are recognised in equity in the 'Available-for-sale reserve' until the securities are either sold or impaired. When available-for-sale securities are sold, cumulative gains or losses previously recognised in equity are recognised in the income statement as 'Gains less losses from financial investments'.

Interest income is recognised on available-for-sale securities using the effective interest rate method, calculated over the asset's expected life. Premiums and/or discounts arising on the purchase of dated investment securities are included in the calculation of their effective interest rates. Dividends are recognised in the income statement when the right to receive payment has been established. Financial investments are recognised using trade date accounting.

At each balance sheet date an assessment is made of whether there is any objective evidence of impairment in the value of a financial asset or group of assets. This usually arises when circumstances are such that an adverse effect on future cash flows from the asset or group of assets can be reliably estimated. If an available-for-sale security is impaired, the cumulative loss (measured as the difference between the asset's acquisition cost and its current fair value, less any impairment loss on that asset previously recognised in the income statement) is removed from equity and recognised in the income statement. Reversals of impairment losses are subject to contrasting treatments depending on the nature of the instrument concerned:

- if the fair value of a debt instrument classified as available-for-sale increases in a subsequent period, and the increase can be objectively related to an event occurring after the impairment loss was recognised in the income statement, the impairment loss is reversed through the income statement;
- impairment losses recognised in the income statement on equity instruments are not reversed through the income statement.

- (ii) Held-to-maturity investments are non-derivative financial assets with fixed or determinable payments and fixed maturities that the group positively intends, and is able, to hold until maturity. Held-to-maturity investments are initially recorded at fair value plus any directly attributable transaction costs, and are subsequently measured at amortised cost using the effective interest rate method, less any impairment losses.

### (j) Sale and repurchase agreements (including stock lending and borrowing)

When securities are sold subject to a commitment to repurchase them at a predetermined price ('repos'), they remain on the balance sheet and a liability is recorded in respect of the consideration received. Securities purchased under commitments to sell ('reverse repos') are not recognised on the balance sheet and the consideration paid is recorded in 'Loans and advances to banks' or 'Loans and advances to customers' as appropriate. The difference between the sale and repurchase price is treated as interest and recognised over the life of the agreement.

Securities lending and borrowing transactions are generally secured, with collateral taking the form of securities or cash advanced or received. The transfer of securities to counterparties is not normally reflected on the balance sheet. Cash collateral advanced or received is recorded as an asset or a liability respectively.

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies (continued)

Securities borrowed are not recognised on the balance sheet, unless they are sold to third parties, in which case the obligation to return the securities is recorded as a trading liability and measured at fair value, and any gains or losses are included in 'Net trading income'.

For repos and security lending, if the counterparty has the right to sell or repledge the securities transferred, the securities are presented separately on the balance.

#### (k) Derivatives and hedge accounting

Derivatives are recognised initially, and are subsequently remeasured, at fair value. Fair values of exchange-traded derivatives are obtained from quoted market prices. Fair values of over-the-counter ('OTC') derivatives are obtained using valuation techniques, including discounted cash flow models and option pricing models.

In the normal course of business, the fair value of a derivative on initial recognition is the transaction price (i.e. the fair value of the consideration given or received). In certain circumstances, however, the fair value will be based on other observable current market transactions in the same instrument, without modification or repackaging, or on a valuation technique whose variables include only data from observable markets, such as interest rate yield curves, option volatilities and currency rates. When such evidence exists, the group recognises a trading profit or loss on inception of the derivative. When unobservable market data have a significant impact on the valuation of derivatives, the entire initial charge in fair value indicated by the valuation model is not recognised immediately in the income statement. It is instead recognised over the life of the transaction on an appropriate basis, or is recognised in the income statement when the inputs become observable, or when the transaction matures or is closed out.

Derivatives may be embedded in other financial instruments, for example, a convertible bond with an embedded conversion option. Embedded derivatives are treated as separate derivatives when their economic characteristics and risks are not clearly and closely related to those of the host contract; the terms of the embedded derivative are the same as those of a stand-alone derivative; and the combined contract is not held for trading or designated at fair value through profit and loss. These embedded derivatives are measured at fair value with changes therein recognised in the income statement.

Derivatives are classed as assets when their fair value is positive, or as liabilities when their fair value is negative. Derivative assets and liabilities arising from different transactions are only offset if the transactions are with the same counterparty, a legal right of offset exists, and the parties intend to settle the cash flows on a net basis.

The method of recognising fair value gains or losses depends on whether derivatives are held for trading or are designated as hedging instruments, and if the latter, the nature of the risks being hedged. All gains and losses from changes in the fair value of derivatives held for trading are recognised in the income statement. When derivatives are designated as hedges, the group classifies them as either: (i) hedges of the change in fair value of recognised assets or liabilities or firm commitments ('fair value hedges'); (ii) hedges of the variability in highly probable future cash flows attributable to a recognised asset or liability, or a forecast transaction ('cash flow hedges'); or (iii) hedges of net investments in a foreign operation ('net investment hedges'). Hedge accounting is applied to derivatives designated as hedging instruments in a fair value, cash flow or net investment hedge provided certain criteria are met.

#### **Hedge accounting**

At the inception of a hedging relationship, the group documents the relationship between the hedging instruments and hedged items, its risk management objective and its strategy for undertaking the hedge. The group also requires a documented assessment, both at hedge inception and on an ongoing basis, of whether or not the derivatives that are used in hedging transactions are highly effective in offsetting the changes attributable to the hedged risks in the fair values or cash flows of the hedged items. Interest on designated qualifying hedges is included in 'Net interest income'.

## 2 Summary of significant accounting policies (continued)

### *Fair value hedge*

Changes in the fair value of derivatives that are designated and qualify as fair value hedging instruments are recorded in the income statement, along with changes in the fair value of the assets, liabilities or group thereof, that are attributable to the hedged risk.

If a hedging relationship no longer meets the criteria for hedge accounting, the cumulative adjustment to the carrying amount of the hedged item is amortised to the income statement based on a recalculated effective interest rate over the residual period to maturity, unless the hedge item has been derecognised whereby it is released to the income statement immediately.

### *Cash flow hedge*

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges are recognised in equity within the cash flow hedging reserve. Any gain or loss in fair value relating to an ineffective portion is recognised immediately in the income statement.

Amounts accumulated in equity are recycled to the income statement in the periods in which the hedged item will affect profit or loss. However, when the forecast transaction that is hedged results in the recognition of a non-financial asset or a non-financial liability, the gains and losses previously deferred in equity are transferred from equity and included in the initial measurement of the cost of the asset or liability.

When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in equity until the forecast transaction is eventually recognised in the income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is immediately transferred to the income statement.

### *Net investment hedge*

Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges. Any gain or loss on the hedging instrument relating to the effective portion of the hedge is recognised in equity; the gain or loss relating to the ineffective portion is recognised immediately in the income statement. Gains and losses accumulated in equity are included in the income statement on the disposal of the foreign operation.

### *Hedge effectiveness testing*

To qualify for hedge accounting, IAS 39 requires that at the inception of the hedge and throughout its life, each hedge must be expected to be highly effective (prospective effectiveness). Actual effectiveness (retrospective effectiveness) must also be demonstrated on an ongoing basis.

The documentation of each hedging relationship sets out how the effectiveness of the hedge is assessed. The method a group entity adopts for assessing hedge effectiveness will depend on its risk management strategy.

For prospective effectiveness, the hedging instrument must be expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period for which the hedge is designated. For actual effectiveness, the changes in fair value or cash flows must offset each other in the range of 80 per cent to 125 per cent for the hedge to be deemed effective.

Hedge effectiveness is recognised in the income statement in 'Net trading income'.

### *Derivatives that do not qualify for hedge accounting*

All gains and losses from changes in the fair values of any derivatives that do not qualify for hedge accounting are recognised immediately in the income statement. These gains and losses are reported in 'Net trading income', except where derivatives are managed in conjunction with financial instruments designated at fair value (other than derivatives related to debt issued by the group), in which case gains and losses are reported in 'Net income from financial instruments designated at fair value'.

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies (continued)

#### (l) Derecognition of financial assets and liabilities

Financial assets are derecognised when the right to receive cash flows from the assets has expired; or when HSBC Bank Middle East Limited has transferred its contractual right to receive the cash flows of the financial assets, and substantially all the risks and rewards of ownership; or where control is not retained. Financial liabilities are derecognised when they are extinguished, i.e. when the obligation is discharged, cancelled or expires.

#### (m) Offsetting financial assets and financial liabilities

Financial assets and financial liabilities are offset and the net amount reported in the balance sheet when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the asset and settle the liability simultaneously.

#### (n) Associates

(i) Investments in associates are recognised using the equity method, initially stated at cost, including attributable goodwill, and are adjusted thereafter for the post-acquisition change in the group's share of net assets.

(ii) Unrealised gains on transactions between the group and its associates are eliminated to the extent of the group's interest in the respective associates. Unrealised losses are also eliminated to the extent of the group's interest in the associates unless the transaction provides evidence of an impairment of the asset transferred.

#### (o) Intangible assets

Intangible assets relate to computer software and are subject to impairment review if there are events or changes in circumstances that indicate that the carrying amount may not be recoverable.

— Intangible assets have a finite useful life and are stated at cost less amortisation and accumulated impairment losses and are amortised over their estimated useful lives. Estimated useful life is the lower of legal duration and expected economic life.

Intangible assets are amortised over their finite useful lives as follows:

Purchased software	over 5 years
Internally generated software	over 5 years

#### (p) Property, plant and equipment

Land and buildings are stated at historical cost, or fair value at the date of transition to IFRSs ('deemed cost'), less any impairment losses and depreciation calculated to write off the assets over their estimated useful lives as follows:

- freehold land is not depreciated;
- freehold buildings are depreciated on cost at the greater of two per cent per annum on a straight-line basis or over their remaining useful lives; and
- leasehold buildings are depreciated on cost over the unexpired terms of the leases, or over their remaining useful lives.

Equipment, fixtures and fittings (including equipment on operating leases where the group is the lessor) are stated at cost less any impairment losses and depreciation calculated on a straight-line basis to write off the assets over their accumulated useful lives, which run to a maximum of 35 years but are generally between five years and 20 years.

## 2 Summary of significant accounting policies (continued)

Property, plant and equipment is subject to an impairment review if there are events or changes in circumstance which indicate that the carrying amount may not be recoverable.

### (q) Finance and operating leases

Agreements which transfer to counterparties substantially all the risks and rewards incidental to the ownership of assets, but not necessarily legal title, are classified as finance leases. When the group is a lessor under finance leases the amounts due under the leases, after deduction of unearned charges, are included in 'Loans and advances to banks' or 'Loans and advances to customers' as appropriate. Finance income receivable is recognised over the periods of the leases so as to give a constant rate of return on the net investment in the leases.

When the group is a lessee under finance leases the leased assets are capitalised and included in 'Property, plant and equipment' and the corresponding liability to the lessor is included in 'Other liabilities'. Leases of land exceeding 500 years to expiry at inception are recognised as finance leases. A finance lease and its corresponding liability are recognised initially at the fair value of the asset or, if lower, the present value of the minimum lease payments. Finance charges payable are recognised over the period of the lease based on the interest rate implicit in the lease so as to give a constant rate of interest on the remaining balance of the liability.

All other leases are classified as operating leases. When acting as lessor, the group includes the assets subject to operating leases in 'Property, plant and equipment' and accounts for them accordingly. Impairment losses are recognised to the extent that residual values are not fully recoverable and the carrying value of the equipment is thereby impaired. When the group is the lessee, leased assets are not recognised on the balance sheet. Rentals payable and receivable under operating leases are accounted for on a straight-line basis over the periods of the leases and are included in 'General and administrative expenses' and 'Other operating income' respectively.

### (r) Income tax

Income tax on the profit or loss for the year comprises current tax and deferred tax. Income tax is recognised in the income statement except to the extent that it relates to items recognised directly in shareholders' equity, in which case it is recognised in shareholders' equity.

Current tax is the tax expected to be payable on the taxable profit for the year, calculated using tax rates enacted or substantially enacted by the balance sheet date, and any adjustment to tax payable in respect of previous years. Current tax assets and liabilities are offset when the group intends to settle on a net basis and the legal right to set-off exists.

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the balance sheet and the amounts attributed to such assets and liabilities for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent it is probable that future taxable profits will be available against which deductible temporary differences can be utilised.

Deferred tax is calculated using the tax rates expected to apply in the periods in which the assets will be realised or the liabilities settled. Deferred tax assets and liabilities are offset when they arise in the same tax reporting group and relate to income taxes levied by the same taxation authority, and when a legal right to set off exists in the entity.

Deferred tax relating to actuarial gains and losses on post-employment benefits is recognised directly in equity. From 1 January 2005, deferred tax relating to fair value remeasurement of available-for-sale investments and cash flow hedges which are charged or credited directly to equity, is also credited or charged directly to equity and is subsequently recognised in the income statement when the deferred fair value gain or loss is recognised in the income statement.

## Notes on the Financial Statements (continued)

### 2 Summary of significant accounting policies (continued)

#### (s) Post-employment benefits

The bank contributes to the Government pension and social security schemes in the countries in which it operates, as per local regulations. End of service benefits are calculated and paid in accordance with local law. The bank's net obligation in respect of such end of service benefits is the amount of future benefits that employees have earned in return for their service in current and prior periods. The obligation is calculated by a qualified actuary using the projected unit credit method (using an emerging cash flow model) allowing for assumed future experience. The discount rate used is the yield on long term, high quality corporate bonds or Central Bank certificate of deposits, where appropriate. All actuarial gains or losses are recognised in shareholders' equity.

The bank also makes contributions to the HSBC International Staff Retirement Benefit Scheme in respect of a small number of International Managers being seconded to the bank by the HSBC Group. The bank accounts for contributions to this scheme as if it is a defined contribution scheme on the basis that any actuarial gains and losses would not be material.

#### (t) Equity compensation plans

Shares in HSBC Holdings plc awarded to an employee on joining the group that are made available immediately, with no vesting period attached to the award, are expensed immediately. When an inducement is awarded to an employee on commencement of employment with the group, and the employee must complete a specified period of service before the inducement vests, the expense is spread over the period to vesting. As these awards are made by the group a liability for the shares is recognised on balance sheet over the vesting period, at fair value.

Share option awards are granted by HSBC Holdings to group employees and are satisfied by HSBC Holdings transferring shares to the employees.

The compensation expense of share options charged to the income statement is credited to the share-based payment reserve over the vesting period. Compensation expense is determined by reference to the fair value of the options on grant date, and the effect of any non-market vesting conditions such as option lapses. An option may lapse if, for example, an employee ceases to be employed by the group before the end of the vesting period. Estimates of future such employee departures are taken into account when accruing the cost during the service period.

The cost of bonuses awarded in respect of past service, by which an employee is required to complete a specified period of future service to be entitled to the award, is spread over the period of service rendered to the vesting date.

#### (u) Foreign currencies

Items included in the financial statements of each of the the group's entities are measured using the currency of the primary economic environment in which the entity operates ('the functional currency'). The consolidated financial statements of HSBC Bank Middle East Limited are presented in US dollars, which is the group's presentation currency.

Transactions in foreign currencies are recorded in the functional currency at the rate of exchange prevailing on the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the rate of exchange ruling at the balance sheet date. Any resulting exchange differences are included in the income statement. Non-monetary assets and liabilities that are measured in terms of historical cost in a foreign currency are translated into the functional currency using the rate of exchange at the date of the initial transaction. Non-monetary assets and liabilities measured at fair value in a foreign currency are translated into the functional currency using the rate of exchange at the date the fair value was determined.

The results of branches, subsidiaries and associates not reporting in US dollars are translated into US dollars at the average rates of exchange for the reporting period. Exchange differences arising from the retranslation of opening foreign currency net investments, and exchange differences arising from retranslation of the result

## 2 Summary of significant accounting policies (continued)

for the reporting period from the average rate to the exchange rate prevailing at the period end, are accounted for in a separate foreign exchange reserve. Exchange differences on a monetary item that is part of a net investment in a foreign operation are recognised in the income statement of the separate subsidiary financial statements. In consolidated financial statements these exchange differences are recognised in the foreign exchange reserve in shareholders' equity. In accordance with IFRS 1, the group has set the cumulative translation differences for all foreign operations to zero at the date of transition to IFRSs. On disposal of a foreign operation, exchange differences relating thereto and previously recognised in reserves are recognised in the income statement.

### (v) Provisions

Provisions are recognised when it is probable that an outflow of economic benefits will be required to settle a current legal or constructive obligation as a result of past events, and a reliable estimate can be made of the amount of the obligation.

### (w) Debt securities in issue and non-equity preference share capital

Debt securities in issue are initially measured at fair value, which is normally the consideration received net of directly attributable transaction costs incurred. Subsequent measurement is at amortised cost, using the effective interest rate method to amortise the difference between proceeds net of directly attributable transaction costs and the redemption amount over the expected life of the debt, unless the securities are designated at fair value (Note 2(h)). Non-equity preference share capital is measured at amortised cost.

### (x) Share capital

Shares are classified as equity when there is no contractual obligation to transfer cash or other financial assets. Incremental costs directly attributable to the issue of equity instruments are shown in equity as a deduction from the proceeds, net of tax.

### (y) Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents include highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of change in value. Such investments are normally those with less than three months' maturity from the date of acquisition, and include cash and balances at central banks, treasury bills and other eligible bills, loans and advances to banks, items in the course of collection from or in transmission to other banks and certificates of deposit.

## 3 Use of assumptions and estimates

---

The results of the group are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its consolidated financial statements. The accounting policies used in the preparation of the consolidated financial statements are described in detail in Note 2.

When preparing the financial statements, it is the directors' responsibility under Jersey company law to select suitable accounting policies and to make judgements and estimates that are reasonable and prudent.

The accounting policies that are deemed critical to the group's IFRSs results and financial position, in terms of the materiality of the items to which the policy is applied, or which involve a high degree of judgement and estimation, are:

### *Impairment of loans*

The group's accounting policy for losses in relation to the impairment of customer loans and advances is described in Note 2(f). Impairment is calculated on the basis of discounted estimated future cash flows.

## Notes on the Financial Statements (continued)

### 3 Use of assumptions and estimates (continued)

#### *Valuation of financial instruments*

The group's accounting policy for valuation of financial instruments is included in Note 2 and is discussed further within Note 13 'Derivatives' and Note 23 'Fair value of financial instruments'.

#### *Post-employment benefits*

The assumptions used are disclosed in Note 5 'Employee compensation and benefits'.

#### *Share-based payments*

The assumptions used are disclosed in Note 7 'Share-based payments'.

### 4 Net operating income

Net operating income for the year ended 31 December 2006 is stated after the following items of income, expense, gains and losses:

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000
<b>Income</b>		
Interest on financial instruments, excluding interest on financial liabilities held for trading or designated at fair value	<b>1,268,509</b>	807,553
Interest recognised on impaired financial assets	<b>13,993</b>	2,824
Fees earned on financial assets that are not held for trading or designated at fair value and that are not included in their effective interest rates	<b>169,227</b>	116,292
Fees earned on trust and other fiduciary activities where the group holds or invests assets on behalf of its customers	<b>4,513</b>	10,602
<b>Expense</b>		
Interest on financial instruments, excluding interest on financial liabilities held for trading or designated at fair value	<b>(562,378)</b>	(269,636)
Fees payable on financial assets or liabilities that are not held for trading or designated at fair value and that are not included in their effective interest rates	<b>(9,533)</b>	—
<b>Losses</b>		
Impairment losses on:		
— loans and advances	<b>(43,227)</b>	(28,676)

### 5 Employee compensation and benefits

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000
Wages and salaries	<b>247,978</b>	188,904
Social security costs	<b>4,109</b>	3,068
Post-employment benefits (Note 2(s))	<b>12,144</b>	18,841
	<b><u>264,231</u></b>	<u>210,813</u>

## 5 Employee compensation and benefits (continued)

The average number of persons employed by the group during the year was made up as follows:

	<b>2006</b>	2005
	<b>Number</b>	Number
Personal Banking	<b>1,560</b>	1,369
Commercial Banking	<b>885</b>	662
Corporate and Institutional Banking	<b>151</b>	124
Global Markets	<b>94</b>	75
Private Banking	<b>3</b>	2
Other	<b>1,725</b>	1,504
	<b><u>4,418</u></b>	<u>3,736</u>

### Post-employment benefits

Arrangements for staff retirement benefits in overseas locations vary from country to country and are made in accordance with local regulations and custom. The majority of branches operate staff indemnity schemes for local staff which take the form of gratuity schemes.

The schemes are reviewed at least annually or in accordance with local practice and regulations by qualified actuaries. The actuarial assumptions used to calculate the scheme obligations vary according to the economic conditions of the countries in which they are situated.

The principal actuarial financial assumptions used to calculate the scheme obligations at 31 December 2006 were:

	<b>Discount rate</b>	<b>Inflation assumption</b>	<b>Rate of increase for benefits in payment and deferred benefits</b>	<b>Rate of pay increase</b>
	%	%	%	%
<b>At 31 December 2006</b>				
United Arab Emirates	<b><u>5.0</u></b>	<b><u>7.0</u></b>	<b><u>16.6</u></b>	<b><u>7.5</u></b>
<b>At 31 December 2005</b>				
United Arab Emirates	<b><u>6.0</u></b>	<b><u>2.5</u></b>	<b><u>12.0</u></b>	<b><u>3.0</u></b>

The bank determines discount rates in consultation with its actuary based upon the yield on long term, high quality corporate bonds or Central Bank certificate of deposits, where appropriate.

## 6 General and administrative expenses

### Auditors' remuneration

Auditors' remuneration in relation to statutory audit amounted to US\$617 thousand (2005: US\$588 thousand). The following remuneration was paid by the group to the group's principal auditor, KPMG Channel Islands Limited and its affiliated firms ('KPMG'):

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000
Audit fees for HSBC Bank Middle East Limited statutory audit:		
— fees relating to current year	<b>617</b>	588
— fees relating to prior year	<b>(27)</b>	—
	<b><u>590</u></b>	<u>588</u>

## Notes on the Financial Statements (continued)

### 6 General and administrative expenses (continued)

Fees payable to KPMG for other services provided to the group		
— other services pursuant to legislation	<b>225</b>	590
— tax services	<b>11</b>	21
— valuation and actuarial services	<b>3</b>	—
— all other services	<b>82</b>	38
	<u><b>321</b></u>	<u>649</u>
Total fees payable	<u><b>911</b></u>	<u>1,237</u>

The following is a description of the type of services included within the categories listed above:

- Audit fees are in respect of fees payable to KPMG Channel Islands Limited and their associates for the statutory audit of the consolidated accounts of HSBC Bank Middle East Limited.
- Other services pursuant to legislation include services for assurance and other services that are in relation to statutory and regulatory filings, including comfort letters and interim reviews.
- Tax services include tax compliance services and tax advisory services.
- All other services include other assurance and advisory services such as translation services, ad-hoc accounting advice and review of financial models.

### 7 Share-based payments

The group has no specific share-based payment arrangements of its own and participates in HSBC Holdings plans consisting of share-option awards and share awards.

Share option awards are granted by HSBC Holdings to group employees and are satisfied by HSBC Holdings transferring shares to the employees on exercise.

Where an award of HSBC Holdings shares is made to a group employee by a group entity, the employing entity has an obligation to transfer HSBC Holdings shares to the employee if the vesting conditions of the award are satisfied. The employing entity incurs a liability in respect of the share awards recognised at fair value, remeasured at each reporting date over the vesting period and at the date of settlement.

During 2006, US\$4,242 thousand was charged to the income statement in respect of equity-settled share-based payment transactions (2005: US\$1,806 thousand). This expense was based on the fair value of the share-based payment transactions when contracted. All of the expense arose under employee share awards made within HSBC's reward structures.

#### Calculation of fair values

Fair values of share options/awards, measured at the date of grant of the option/award, are calculated using a binomial lattice model methodology that is based on the underlying assumptions of the Black-Scholes model. When modelling options/awards with vesting dependent on HSBC's Total Shareholder Return over a period, these performance targets are incorporated into the model using Monte-Carlo simulation. The expected life of options depends on the behaviour of option holders, which is incorporated into the option model consistent with historic observable data. The fair values calculated are inherently subjective and uncertain due to the assumptions made and the limitations of the model used.

## 7 Share-based payments (continued)

The significant weighted average assumptions used to estimate the fair value of the options granted in 2006 were as follows:

	1-year Savings Related Share Option Schemes	3-year Savings Related Share Option Schemes	5-year Savings Related Share Option Schemes	The HSBC Share Plan
Risk-free interest rate (%) <sup>1</sup>	4.7	4.8	4.7	—
Expected life (years) <sup>2</sup>	1.0	3.0	5.0	—
Expected volatility (%) <sup>3</sup>	17.0	17.0	17.0	—

1 *The risk-free rate was determined from the UK gilts yield curve for Group Share Option Plan awards and UK Savings-Related Share Option Schemes. A similar yield curve was used for the Overseas Savings-Related Share Option Schemes.*

2 *Expected life is not a single input parameter but a function of various behavioural assumptions.*

3 *Expected volatility is estimated by considering both historic average share price volatility and implied volatility derived from traded options over HSBC shares of similar maturity to those of the employee options.*

Expected dividends have been incorporated into the valuation model for options and shares, where applicable. Expected dividend yield was determined, denominated in US Dollars, to be 9 per cent for the first year (2005: 12 per cent) and 8 per cent thereafter (2005: 8 per cent), consistent with consensus analyst forecasts.

The average share price for 2006 was £9.595 (2005: £8.89). The high mid-market price for the year was £10.28 and the low mid-market price was £9.135 (2005: £9.50 and £8.25 respectively).

The significant weighted average assumptions used to estimate the fair value of the options granted in 2005 were as follows:

	Group Share Option Plan	3-year Savings Related Share Option Schemes	5-year Savings Related Share Option Schemes	The HSBC Share Plan
Risk-free interest rate (%) <sup>1</sup>	4.6	4.3	4.3	4.3
Expected life (years) <sup>2</sup>	7.8	3.0	5.0	5.0
Expected volatility (%) <sup>3</sup>	20.0	20.0	20.0	20.0

1 *The risk-free rate was determined from the UK gilts yield curve for Group Share Option Plan awards and UK Savings-Related Share Option Schemes. A similar yield curve was used for the Overseas Savings-Related Share Option Schemes.*

2 *Expected life is not a single input parameter but a function of various behavioural assumptions.*

3 *Expected volatility is estimated by considering both historic average share price volatility and implied volatility derived from traded options over HSBC shares of similar maturity to those of the employee options.*

### HSBC Share Plan

The HSBC Share Plan was adopted by the group in 2005. This Plan comprises Performance share awards, Restricted share awards and Achievement share awards. The aim of the HSBC Share Plan is to align the interests of executives to the creation of shareholder value and recognise individual performance and potential. Awards are also made under this plan for recruitment and retention purposes.

#### Performance share awards

Performance share awards are made to senior executives taking into account individual performance in the prior year. Performance share awards are divided into two equal parts for testing attainment against pre-determined benchmarking. One half is subject to a Total Shareholder Return measure, based on HSBC's ranking against a comparator group of 28 major banks. The other half of the award is subject to an Earnings Per Share target. For each element of the award, shares would be released to the employee according to a sliding scale from 30 to 100

## Notes on the Financial Statements (continued)

## 7 Share-based payments (continued)

per cent of the award, dependent upon the scale of achievement against the benchmarks and provided that a threshold has been passed. If the threshold is not passed, 0 per cent will vest for that part of the award. Shares will be released after three years to the extent that the performance conditions are satisfied. These awards are forfeited in total if the Group performance fails to meet the minimum criteria.

	<b>2006</b>	2005
	<b>Number</b>	Number

Outstanding at 31 December	<b>246</b>	<b>246</b>

The weighted average fair value of shares awarded by HSBC for Performance Share Awards in 2006 was £7.38 (2005: £4.93)

*Restricted share awards*

Restricted Share awards are made to eligible employees for recruitment and retention purposes or as part of deferral of annual bonus. The awards vest between one and three years from date of award.

	<b>2006</b>	2005
	<b>Number</b>	Number
	<b>(000's)</b>	(000's)
Outstanding at 1 January	—	—
Additions during the year	<b>140</b>	—
Forfeited in the year	<b>(12)</b>	—
Outstanding at 31 December	<b>128</b>	—

The weighted average fair value of shares awarded by HSBC for Restricted Share Awards in 2006 was £9.65 (2005: £8.68)

**Savings-related share option plans**

The savings-related share option plans invite eligible employees to enter into savings contracts to save up to £250 per month, with the option to use the savings to acquire shares. The aim of the plan is to align the interests of all employees to the creation of shareholder value. The options are exercisable within six months following either the third or the fifth anniversary of the commencement of the savings contract depending on conditions set at grant. The exercise price is set at a 20 per cent (2005: 20 per cent) discount to the market value at the date of grant.

	<b>2006</b>		2005	
	<b>Number</b>	<b>Weighted average exercise price</b>	Number	Weighted average exercise price
	<b>(000's)</b>	<b>£</b>	(000's)	£

Outstanding at 31 December	<b>1,497</b>	<b>6.46</b>	<b>1,558</b>	<b>6.18</b>

## 7 Share-based payments (continued)

The weighted average fair value of options granted in the year as at the date of grant was £1.98 (2005: £2.05). The number of options, weighted average exercise price, and the weighted average remaining contractual life for options outstanding at the balance sheet date, analysed by exercise price range, were as follows:

	<b>2006</b>	2005
Exercise price range (£)	<b>£5.35-£8.02</b>	£5.35-£6.75
Number (000£s)	<b>1,671</b>	1,732
Weighted average exercise price (£)	<b>6.46</b>	6.18

### Restricted Share Plan 2000

#### *Performance Share awards made under the HSBC Holdings Restricted Share Plan 2000*

Performance Share awards under the Restricted Share Plan were granted to Senior Executives from 1996 to 2004. The aim of the plan was to align the interests of executives to the creation of shareholder value. This was achieved by setting certain Total Shareholder Return targets against a peer group of major banks which must normally be attained in order for the awards to vest. No further awards will be made under this Plan following adoption of the HSBC Share Plan in 2005.

	<b>2006</b>	2005

Additionally during the year	<b>4</b>	—
Released in the year	<b>(13)</b>	—
Transferred in the year	<b>(1)</b>	—
Outstanding at 31 December	<b>91</b>	101

The fair value of the shares at 31 December 2006 was £9.31 (2005: £9.33).

The weighted average remaining vesting period as at 31 December 2006 was 15 months (2005: 23 months).

#### *Restricted share awards made under the HSBC Holdings Restricted Share Plan 2000 ('Achievement Shares')*

Achievement shares are utilised to promote widespread interest in HSBC Holdings shares among employees and to help foster employee engagement. They are awarded to eligible employees after taking into account the employee's performance in the prior year. Shares are awarded without corporate performance conditions and are released to employees after three years providing the employees have remained continuously employed by the Group for this period.

	<b>2006</b>	2005

The weighted average fair value of shares awarded by the group for Achievement Share Awards in 2006 was £9.65 (2005: £8.68).

## Notes on the Financial Statements (continued)

## 7 Share-based payments (continued)

*Other awards made under the Restricted Share Plan*

Other awards were made under the HSBC Holdings Restricted Share Plan 2000 as part deferral of annual bonus. Awards were also made for recruitment and retention purposes. The awards generally vest from one to three years from the date of award. Awards made under this plan ceased in May 2005. Awards of restricted shares on or after 27 May 2005 were made under the Rules of the HSBC Share Plan.

	<b>2006</b>	2005

Outstanding at 31 December	<b>43</b>	<b>63</b>

No shares were awarded by the group for HSBC Holdings Restricted Share Plan 2000 in 2006. In 2005, the weighted average fair value of such shares awarded was £8.60.

**Group Share Option Plan**

The Group Share Option Plan was a long-term incentive plan available to certain group employees between 2000 and 2005. The aim of the plan was to align the interests of those higher performing employees to the creation of shareholder value. This was achieved by setting certain Total Shareholder Return targets which must normally be attained in order for the awards to vest. Options were granted at market value and are normally exercisable between the third and tenth anniversaries of the date of grant, subject to vesting conditions.

	<b>2006</b>		2005	
	<b>Number</b>	<b>Weighted average exercise price</b>	Number	Weighted average exercise price

Outstanding at 31 December	<b>1,25</b>	<b>7.82</b>	<b>1,556</b>	<b>7.74</b>

**Executive Share Option Scheme**

The Executive Share Option Scheme was a long-term incentive scheme under which certain senior employees were awarded share options before the adoption of the Group Share Option Plan in 2000. The aim of the plan was to align the interests of those higher performing senior employees to the creation of shareholder value. This was achieved by setting certain Total Shareholder Return targets to be attained in order for the awards to vest. Options were granted at market value and were exercisable between the third and tenth anniversaries of the date of grant, subject to vesting conditions. No awards have been made under this plan since 2000 and the remaining unexercised options are summarised below:

	<b>2006</b>		2005	
	<b>Number</b>	<b>Weighted average exercise price</b>	Number	Weighted average exercise price

## 8 Tax expense

The charge for taxation comprises:

	2006 US\$000	2005 US\$000
<b>Current tax</b>		
Overseas tax — current year	125,891	98,046
Overseas tax — adjustment in respect of prior years	1,090	(734)
Overseas tax — irrecoverable withholding tax	116	—
	<u>127,097</u>	<u>97,312</u>
<b>Deferred tax</b>		
Origination and reversal of temporary differences	446	(5,547)
Effect of write-downs / reversal of write-downs of deferred tax assets	<u>446</u>	<u>(5,547)</u>
Tax expense	<u>127,543</u>	<u>91,765</u>

The bank is not resident in the United Kingdom for taxation purposes. The bank and subsidiary undertakings provide for taxation at the appropriate rates in the countries in which they operate.

	2006		2005	
	US\$000	Percentage of overall tax %	US\$000	Percentage of overall tax %
<b>Analysis of overall tax charge</b>				
Taxation at UAE tax rate of 20 per cent (2005: 20 per cent)	118,971	19.6	89,829	18.9
Impact of overseas profits in principal locations taxed at different rates <sup>1</sup>	15,802	2.6	9,247	1.9
Income not subject to tax	(11,806)	(1.9)	(10,173)	(2.1)
Expenses not deductible for tax purposes	2,319	0.4	2,215	0.5
Prior period adjustments	365	0.1	(809)	(0.2)
Other items	1,892	0.3	1,456	0.3
Overall tax charge	<u>127,543</u>	<u>21.0</u>	<u>91,765</u>	<u>19.3</u>

1 Overseas profits taxed at different rates to that which applies in the UAE contributed to an increase in the effective tax rate of 0.43 per cent (2005: increase of 1.13 per cent). The increase in the effective tax rate is because of the greater proportion of group profits arising in Qatar, where they are subject to a higher rate of tax than in the UAE, in 2006 and 2005.

In addition to the amount charged to the income statement the aggregate amount of deferred taxation, relating to items that are charged directly to equity, was US\$102 thousand (2005: US\$ Nil).

The group is subject to income taxes in many jurisdictions and significant judgement is required in estimating the group's provision for income taxes. There are many transactions and interpretations of tax law for which the final outcome will not be established until some time later. The group recognises liabilities for taxation based on estimates of whether additional taxes will be payable. The estimation process includes seeking expert advice where appropriate. Where the final liability for taxation is different from the amounts that were initially recorded, these differences will affect the income tax and deferred taxation provisions in the period in which the estimate is revised or the final liability is established.

## 9 Dividends

## Notes on the Financial Statements (continued)

## 11 Analysis of financial assets and liabilities by measurement bases

Financial assets and financial liabilities are measured on an ongoing basis either at fair value or at amortised cost. The principal accounting policies in Note 2 describe how the classes of financial instruments are measured, and how income and expenses, including fair value gains and losses, are recognised. The following table analyses the financial assets and liabilities in the balance sheet by the class of financial instrument to which they are assigned, and therefore by the measurement basis:

	<i>Held for trading</i>	<i>Loans and receivables</i>	<i>Available-for-sale securities</i>	<i>Financial assets and liabilities at amortised cost</i>	<i>Derivatives designated as fair value hedging instruments</i>	<i>Derivatives designated as cash flow hedging instruments</i>	<i>Total</i>
	<i>US\$000</i>	<i>US\$000</i>	<i>US\$000</i>	<i>US\$000</i>	<i>US\$000</i>	<i>US\$000</i>	<i>US\$000</i>

Derivatives are financial instruments that derive their value from the price of an underlying item such as equities, bonds, interest rates, foreign exchange, credit spreads, commodities and equity or other indices. Derivatives enable users to increase, reduce or alter exposure to credit or market risks. The group makes markets in derivatives for its customers and uses derivatives to manage its exposure to credit and market risks.

Derivatives are carried at fair value and shown in the balance sheet as separate totals of assets and liabilities. Asset values represent the cost to the group of replacing all transactions with a fair value in the group's favour assuming that all group's relevant counterparties default at the same time, and that transactions can be replaced instantaneously. Liability values represent the cost to the group counterparties of replacing all their transactions with the group with a fair value in their favour if the group were to default. Derivative assets and liabilities on different transactions are only netted if the transactions are with the same counterparty, a legal right of set-off exists and the cash flows are intended to be settled on a net basis.

## Use of derivatives

The group transacts derivatives for three primary purposes: to create risk management solutions for clients, for proprietary trading purposes, and to manage and hedge the group's own risks. For accounting purposes, derivative instruments are classified as held either for trading or hedging. Derivatives that are held as hedging instruments are formally designated as hedges as defined in IAS 39. All other derivative instruments are classified as held-for-trading. The held-for-trading classification includes two types of derivative instruments: those used in sales and trading activities, and those instruments that are used for risk management purposes but which for various reasons do not meet the qualifying criteria for hedge accounting. The second type of held-for-trading

### 13 Derivatives (continued)

category includes derivatives managed in conjunction with financial instruments designated at fair value. These activities are described more fully below.

The group's derivative activities give rise to significant open positions in portfolios of derivatives. These positions are managed constantly to ensure that they remain within acceptable risk levels, with offsetting deals being utilised to achieve this where necessary. Whilst the group employs the same credit risk management procedures to approve potential credit exposures for derivatives as are used for traditional lending, the calculations and procedures used to assess credit risk for derivatives are more complex.

#### Trading derivatives

Most of the group's derivative transactions relate to sales and trading activities. Sales activities include the structuring and marketing of derivative products to customers to enable them to take, transfer, modify or reduce current or expected risks. Trading activities in derivatives are entered into principally for the purpose of generating profits from short-term fluctuations in price or margin. Positions may be traded actively or be held over a period of time to benefit from expected changes in currency rates, interest rates, equity prices or other market parameters. Trading includes market-making, positioning and arbitrage activities. Market-making entails quoting bid and offer prices to other market participants for the purpose of generating revenues based on spread and volume; positioning means managing market risk positions in the expectation of benefiting from favourable movements in prices, rates or indices; arbitrage involves identifying and profiting from price differentials between markets and products.

As mentioned above, other derivatives classified as held for trading include non-qualifying hedging derivatives, ineffective hedging derivatives and the components of hedging derivatives that are excluded from assessing hedge effectiveness. Non-qualifying hedging derivatives are entered into for risk management purposes but do not meet the criteria for hedge accounting. These include derivatives managed in conjunction with financial instruments designated at fair value. Ineffective hedging derivatives were previously designated as hedges, but no longer meet the criteria for hedge accounting.

#### Contract amounts of derivatives held-for-trading purposes by product type

	2006	2005
	US\$000	US\$000
Exchange rate	20,639,365	13,285,433
Interest rate	6,889,736	5,696,039
Equities	203,655	—
Total derivatives	<u>27,732,756</u>	<u>18,981,472</u>

The notional or contractual amounts of these instruments indicate the nominal value of transactions outstanding at the balance sheet date; they do not represent amounts at risk.

#### Hedging Instruments

The group uses derivatives (principally interest rate swaps) for hedging purposes in the management of its own asset and liability portfolios and structural positions. This enables the group to optimise the overall cost to the group of accessing debt capital markets, and to mitigate the market risk which would otherwise arise from structural imbalances in the maturity and other profiles of its assets and liabilities.

## Notes on the Financial Statements (continued)

### 13 Derivatives (continued)

The accounting treatment of hedge transactions varies according to the nature of the instrument hedged and the type of hedge transactions. Derivatives may qualify as hedges for accounting purposes if they are fair value hedges, or cash flow hedges. These are described under the relevant headings below.

#### Contract amounts of derivatives held for hedging purposes by product type

	<u>At 31 December 2006</u>		<u>At 31 December 2005</u>	
	Cash flow hedge US\$000	Fair value hedge US\$000	Cash flow hedge US\$000	Fair value hedge US\$000
Interest rate	249,983	61,009	—	61,007

The notional or contractual amounts of these instruments indicate the nominal value of transactions outstanding at the balance sheet date; they do not represent amounts at risk.

#### Fair value hedges

The group's fair value hedges principally consist of interest rate swaps that are used to protect against changes in the fair value of fixed-rate long-term financial instruments due to movements in market interest rates. For qualifying fair value hedges, all changes in the fair value of the derivative and in the fair value of the item in relation to the risk being hedged are recognised in income. If the hedge relationship is terminated, the fair value adjustment to the hedged item continues to be reported as part of the basis of the item and is amortised to income as a yield adjustment over the remainder of the hedging period.

The fair values of outstanding derivatives designated as fair value hedges at 31 December 2006, were assets of US\$1,222 thousand and liabilities of US\$873 thousand.

#### Gains or losses arising from the change in fair value of fair value hedges

	2006 US\$000	2005 US\$000
Gains/(losses) arising from the change in fair value of fair value hedges:		
— on hedged instruments	461	—
— on hedged items attributable to the hedged risk	(542)	92

The amount reported in the income statement in respect of the ineffectiveness of fair value hedges was insignificant in the year ended 31 December 2006.

#### Cash flow hedges

The group is exposed to variability in future interest cash flows on non-trading assets and liabilities which bear interest at variable rates or which are expected to be re-funded or reinvested in the future. The amounts and timing of future cash flows, representing both principal and interest flows, are projected for each portfolio of financial assets and liabilities on the basis of their contractual terms and other relevant factors, including estimates of prepayments and defaults. The aggregate principal balances and interest cash flows across all portfolios over time form the basis for identifying gains and losses on the effective portions of derivatives designated as cash flow hedges of forecast transactions. These are initially recognised directly in equity as gains or losses not recognised in the income statement and are transferred to current period earnings when the forecast cash flows affect net profit or loss.

At 31 December 2006, the fair values of outstanding derivatives designated as cash flow hedges of forecast transactions were assets of US\$ Nil (2005: US\$ Nil) and liabilities of US\$4,487 thousand (2005: US\$ Nil).

### 13 Derivatives (continued)

The schedule of forecast principal balances on which the expected interest cash flows arise as at 31 December 2006 is as follows:

	At 31 December 2006			
	More than 3 months but		5 years or less but	
	3 months or less	less than 1 year	more than 1 year	More than 5 years
	US\$000	US\$000	US\$000	US\$000
Cash inflows from assets	—	—	—	—
Cash outflows from liabilities	249,983	249,983	249,983	—
Net cash inflows/(outflows)	249,983	249,983	249,983	—
	At 31 December 2005			
	More than 3 months but		5 years or less but	
	3 months or less	less than 1 year	more than 1 year	More than 5 years
	US\$000	US\$000	US\$000	US\$000
Cash inflows from assets	—	—	—	—
Cash outflows from liabilities	—	—	—	—
Net cash inflows/(outflows)	—	—	—	—

The gains and losses on ineffective portions of such derivatives are recognised immediately in the income statement. During the year to 31 December 2006, no gains or losses were recognised due to hedge ineffectiveness.

Fair value profits on derivatives and complex structured products indicated by a valuation model for which observable market data are not available for key components are not recognised immediately in the income statement. These profits are recognised in the income statement when the model valuation inputs become observable in external markets or when the transaction matures or is closed out. The table below summarises the group's portfolios held at fair value by valuation methodology at 31 December 2006:

	Assets		Liabilities	
	Trading securities purchased	Derivatives	Trading securities sold	Derivatives
	%	%	%	%
<b>Fair value based on:</b>				
Quoted market prices	97	—	100	—
Internal models with significant observable market parameters	3	100	—	100
	100	100	100	100

## 15 Interests in associates

## Principal associates of the bank

Name of associate	Country of incorporation	Principal activity	At 31 December 2006	
			The bank's interest in equity capital	Issued equity capital
Arabian Real Estate Investment Trust Management Limited	Cayman Islands	Real estate	40.00%	US\$1.8 million of which US\$1.6 million is fully paid
British Arab Commercial Bank Limited	England	Banking	46.51%	US\$81 million and £32 million fully paid £5 million nil paid
MENA Infrastructure Fund (GP) Limited	Dubai, UAE	Private equity fund management	33.33%	US\$0.99 million fully paid
Rewards Management Middle East Free Zone Limited Liability Company	Dubai, UAE	Multi-participant loyalty programmes	40.00%	AED0.5 million

During the year Arabian Real Estate Investment Trust Management Limited increased its issued equity capital to US\$1.8 million. On 17 August 2006, the bank invested a further US\$400 thousand.

On 4 December 2006, the bank purchased 33.33 per cent of the equity share capital of MENA Infrastructure Fund (GP) Limited at a cost of US\$330 thousand.

British Arab Commercial Bank Limited has issued US\$44,478 thousand of subordinated unsecured loan stock in which the group has a 34.66 per cent interest.

The bank's share of associates' contingent liabilities amounted to US\$548,475 thousand at 31 December 2006 (2005: US\$435,509 thousand).

The associates are unlisted.

Arabian Real Estate Investment Trust Management Limited operates in Dubai, UAE.

British Arab Commercial Bank Limited operates in North Africa and the Eastern Mediterranean.

## 15 Interests in associates (continued)

MENA Infrastructure Fund (GP) Limited operates in Dubai, UAE.

Rewards Management Middle East Free Zone Limited Liability Company operates in Dubai, UAE and Qatar.

Movement in investments in associates:

	<b>2006</b>

## Notes on the Financial Statements (continued)

**18 Investments**

The principal subsidiary undertakings of the Bank are:

	<b>Country of incorporation or registration</b>	<b>Bank's interest in equity</b>
HSBC Bank Middle East Nominees W.L.L.	Bahrain	95%
HSBC Financial Services (Middle East) Limited	Dubai, UAE	100%
HSBC Middle East Finance Company Limited	Dubai, UAE	80%

All the above make their financial statements up to 31 December.

The subsidiary undertakings are directly owned and are included in the consolidation.

The countries of operation are the same as the countries of incorporation.

The subsidiary undertakings are unlisted.

**19 Other assets**

	<b>2006 US\$000</b>	<b>2005 US\$000</b>
Assets held for sale	<b>1,990</b>	2,394

## 20 Debt securities in issues (continued)

The following table analyses the carrying amounts of medium term notes in issue at 31 December 2006 with original maturities greater than one year.

	2006 US\$000	2005 US\$000
<b>Variable interest rate</b>		
Vanilla debt - 4.00% to 4.99%: due 2009 to 2010	—	1,064,328
Vanilla debt - 5.00% to 5.99%: due 2009 to 2011	1,993,900	—
	<u>1,993,900</u>	<u>1,064,328</u>

### Medium term notes

On 11 October 2004, the bank established a Debt Issuance Programme providing for the issue of up to US\$1,000,000,000 in debt securities in the form of medium-term notes. On 14 December 2004, the bank issued, under the Programme, a first tranche of US\$300,000,000 floating rate notes due 14 December 2009. On 5 May 2005, the bank issued, under the Programme, a second tranche of US\$700,000,000 floating rate notes due 5 May 2010. On 28 September 2006, the bank's Debt Issuance Programme was extended to provide for the issue of up to US\$3,000,000,000 in debt securities in similar form. On 14 November 2006, the bank issued, under the Programme, a third tranche of US\$1,000,000,000 floating rate notes due 14 November 2011. The costs of the issue have been amortised over the life of the notes. The notes are listed on the Main Official List of the United Kingdom Listing Authority.

### Non-equity preference share capital

#### Authorised

On 12 April 2006, the authorised non-equity preference share capital of the bank was increased from 750,000 cumulative redeemable preference shares of US\$1.00 each to 1,250,000 cumulative redeemable preference shares of US\$1.00 each

#### Issued

The issued preference shares comprise a first issue on 29 October 1997 of 50,000 perpetual cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share, a second issue on 1 April 1998 of 25,000 perpetual cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share, a third issue on 17 December 2003 of 225,000 dated cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share, a fourth issue on 26 August 2004 of 100,000 dated cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share, a fifth issue on 19 December 2005 of 100,000 dated cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share and a sixth issue on 14 March 2006 of 100,000 dated cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share and 150,000 perpetual cumulative redeemable preference shares of nominal value US\$1 each at a premium of US\$999 per share.

Each share carries one vote at meetings of the shareholders of the bank.

On the first issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.35 per cent on the issue price of each perpetual share are payable annually.

The first issue perpetual cumulative redeemable preference shares bear no mandatory redemption date but are redeemable at the option of the bank on any date after 31 October 2002. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the second issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.70 per cent on the issue price of each perpetual share are payable annually.

## Notes on the Financial Statements (continued)

### 20 Debt securities in issues (continued)

The second issue perpetual cumulative redeemable preference shares bear no mandatory redemption date but are redeemable at the option of the bank on any date after 2 April 2003. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the third issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.50 per cent on the issue price of each dated share are payable annually

The redemption of the third issue dated cumulative redeemable preference shares, other than at the option of the bank as described below, will be subject to the approval of the ordinary shareholders of the bank. The earliest date for redemption will be 17 December 2013 and if not approved by the shareholders will next fall for review at 10 yearly intervals thereafter. However, the shares may be redeemed at the option of the bank on any date after 17 December 2008, without the approval of the ordinary shareholders of the bank. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the fourth issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.48 per cent on the issue price of each dated share are payable annually.

The redemption of the fourth issue dated cumulative redeemable preference shares, other than at the option of the bank as described below, will be subject to the approval of the ordinary shareholders of the bank. The earliest date for redemption will be 26 August 2014 and if not approved by the shareholders will next fall for review at 10 yearly intervals thereafter. However, the shares may be redeemed at the option of the bank on any date after 26 August 2009, without the approval of the ordinary shareholders of the bank. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the fifth issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.30 per cent on the issue price of each dated share are payable annually.

The redemption of the fifth issue dated cumulative redeemable preference shares, other than at the option of the bank as described below, will be subject to the approval of the ordinary shareholders of the bank. The earliest date for redemption will be 19 December 2015 and if not approved by the shareholders will next fall for review at 10 yearly intervals thereafter. However, the shares may be redeemed at the option of the bank on any date after 19 December 2010, without the approval of the ordinary shareholders of the bank. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the sixth issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.40 per cent on the issue price of each dated share are payable annually

The redemption of the sixth issue dated cumulative redeemable preference shares, other than at the option of the bank as described below, will be subject to the approval of the ordinary shareholders of the bank. The earliest date for redemption will be 14 March 2016 and if not approved by the shareholders will next fall for review at 10 yearly intervals thereafter. However, the shares may be redeemed at the option of the bank on any date after 14 March 2011, without the approval of the ordinary shareholders of the bank. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

On the sixth issue, cumulative redeemable preference dividends of 12 month US dollar LIBOR + 0.65 per cent on the issue price of each perpetual share are payable annually.

The sixth issue perpetual cumulative redeemable preference shares bear no mandatory redemption date but are redeemable at the option of the bank on any date after 15 March 2011. On redemption, the holders of the shares shall be entitled to receive an amount equal to any accrued but unpaid dividends plus the issue price of each share.

In the event of a winding up, the US dollar preference shareholders would receive, in priority to the ordinary shareholders of the bank, repayment of US\$1,000 per share, plus an amount equal to any accrued but unpaid dividends. With the exception of the above, the preference shares do not carry any right to participate in the surplus of assets on a winding up.

## 21 Other liabilities

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000

<b>At 31 December 2006</b>	<b><u>1,721</u></b>

Included within “other provisions” is an amount of US\$731 thousand (2005: US\$939 thousand) relating to the “HSBC In The Community Middle East Foundation”. This is a charitable trust established by the bank, whose aim is to provide funding to Middle East nationals, primarily for educational purposes and for environmental projects in the region. Funding is provided on a case by case basis, throughout the year.

## Notes on the Financial Statements (continued)

**23 Fair value of financial instruments**

The following table provides an analysis of the fair value of financial instruments not measured at fair value in the balance sheet. For all other instruments the fair value is equal to the carrying value:

	2006		2005	
	Carrying value US\$000	Fair value US\$000	Carrying value US\$000	Fair value US\$000
<b>Assets</b>				
Loans and advances to banks	7,373,902	7,374,000	4,845,167	4,842,183
Loans and advances to customers	13,616,602	13,637,364	11,372,418	11,420,230
<b>Liabilities</b>				
Deposits by banks	1,361,543	1,363,392	758,287	758,095
Customer accounts	17,581,720	17,578,542	14,174,426	14,178,515
Debt securities in issue: Medium term notes (Note 20)	1,993,900	1,990,996	1,064,328	1,060,658

The methods used to determine fair values for financial instruments for the purpose of measurement and disclosure are set out in Note 2. The majority of the group's financial instruments measured at fair value are valued using quoted market prices or valuation techniques based on observable market data. Observable market prices are not, however, available for many of the group's financial assets and liabilities not measured at fair value. The determination of the fair values of the assets and liabilities in the table above are as follows:

*(i) Loans and advances to banks and customers*

The fair values of personal and commercial loans and advances are estimated by discounting anticipated cash flows (including interest at contractual rates).

Performing loans are grouped, as far as possible, into homogeneous pools segregated by maturity and the coupon rates of the loans within each pool. In general, cash flows are discounted using current market rates for instruments with similar maturity, repricing and credit risk characteristics. For fixed rate loans, assumptions are made on the expected prepayment rates appropriate to the type of loan.

For non-performing uncollateralised commercial loans, fair value is estimated by discounting the future cash flows over the time period they are expected to be recovered. For non-performing commercial loans where collateral exists, fair value is the lower of the carrying values of the loans net of impairment allowances, and the fair value of the collateral, discounted as appropriate.

*(ii) Deposits by banks and customer accounts*

Deposits by banks and customer accounts are grouped by residual maturity. Fair values are estimated using discounted cash flows, applying either market rates, where applicable, or current rates offered for deposits of similar remaining maturities.

*(iii) Debt securities in issue*

Fair values are determined using quoted market prices at the balance sheet date where applicable, or by reference to quoted market prices for similar instruments.

The fair values presented in the table above are stated at a specific date and may be significantly different from the amounts which will actually be paid or received on the maturity or settlement dates of the instruments. In many cases, it would not be possible to realise immediately the estimated fair values. Accordingly these fair values do not represent the value of these financial instruments to the group as a going concern.

The fair values of intangible assets, such as values placed on portfolios of core deposits, credit card relationships and customer goodwill, are not included above, because they are not financial instruments.

As other financial institutions use different valuation methodologies and assumptions in determining fair values, comparisons of fair values between financial institutions may not be meaningful and users are advised to exercise caution when using this data.

### 23 Fair value of financial instruments (continued)

In addition, the following table lists those financial instruments where the carrying amount is a reasonable approximation of fair value, for example, because they are either short term in nature or reprice to current market rates frequently.

<b>Assets</b>	<b>Liabilities</b>
Cash and balances at central banks	Items in the course of transmission
Items in the course of collection	Endorsements and acceptances
Endorsements and acceptances	Short-term payables within 'Other Liabilities'
Short term receivables within 'Other Assets'	

### 24 Trading liabilities

	Carrying amount	
	2006	2005
	US\$000	US\$000
Other liabilities - net short positions	<b>70,342</b>	—

### 25 Maturity analysis of liabilities

The following is an analysis of undiscounted cash flows payable under financial liabilities by remaining contractual maturities at the balance sheet date:

	On demand	Due within 3 months	Due between 3 and 12 months	Due between 1 and 5 years	Due after 5 years	Total
	US\$000	US\$000	US\$000	US\$000	US\$000	US\$000
Deposits by banks	166,962	1,153,981	41,080	7,411	—	1,369,434
Customer accounts	7,486,610	8,898,590	1,026,224	295,706	2,694	17,709,824

<b>Total at 31 December 2005</b>	<b>5,982,183</b>	<b>8,478,833</b>	<b>1,246,867</b>	<b>1,872,838</b>	<b>928,564</b>	<b>18,509,285</b>

## Notes on the Financial Statements (continued)

## 25 Maturity analysis of liabilities (continued)

The following is an analysis, by remaining contractual maturities at the balance sheet date, of assets and liability line items that combine amounts expected to be recovered or settled in under one year, and after one year.

Contractual maturity is considered to be a reasonable approximation of expected maturity for the assets and liabilities analysed below. However, for items such as demand deposits and overdrafts, the contractual maturities could differ from expected maturities.

Trading assets and liabilities are expected to be recovered or settled no more than twelve months after the balance sheet date, and therefore are excluded from this analysis.

	At 31 December 2006		
	Due within 1 year US\$000	Due after more than 1 year US\$000	Total US\$000
<b>Assets</b>			
Loans and advances to banks	7,309,700	64,202	7,373,902

	<b>15,283,047</b>	<b>1,780,527</b>	<b>17,063,574</b>

Further discussion of the group's liquidity and funding management can be found in Note 30 'Risk management'.

## 26 Foreign currency exposures

---

### Structural currency exposures

The group's structural foreign currency exposure is represented by the net asset value of its foreign currency equity investments in subsidiary undertakings, branches and associates. Gains or losses on structural foreign currency exposures are taken to reserves.

The group's management of structural foreign currency exposures is discussed in the 'Market risk' section on pages 66 to 71.

### Net structural currency exposures

<i>Currency of structural exposure</i>	<b>2006</b> US\$000	2005 US\$000
Bahraini dinar	<b>90,402</b>	61,755
Jordanian dinar	<b>92,322</b>	73,057

**30 Risk management**

All the group's activities involve analysis, evaluation, acceptance and management of some degree of risk or combination of risks. The most important types of risk arising from financial instruments are credit risk (which includes country and cross-border risk), liquidity risk and market risk. Market risk includes foreign exchange, interest rate and equity price risk.

The management of all risks which are significant to the group is discussed below.

**(a) Credit risk management**

Credit risk is the risk that financial loss arises from the failure of a customer or counterparty to meet its obligations under a contract. It arises principally from lending, trade finance, treasury and leasing activities. The group has standards, policies and procedures dedicated to controlling and monitoring risk from all such activities.

HSBC Holdings plc is responsible for the formulation of high-level credit policies. It also reviews the application of the HSBC Group's universal facility grading system. Historically, the group's risk rating framework has consisted of a minimum of seven grades, taking into account the risk of default and the availability of security or other credit risk mitigation. The first three of which are applied to differing levels of satisfactory risk. Accounts

### 30 Risk management (continued)

in grade 4 and 5 require different degrees of special attention and grades 6 and 7 indicate non-performing status. A more sophisticated risk rating framework for banks and other customers, based on default probability and loss estimates and comprising up to 22 categories, is being progressively implemented across the HSBC Group and is already operative in most major business units.

This new approach will increasingly allow a more granular analysis of risk and trends. Rating methodology is based upon a wide range of financial analytics together with market data-based tools which are core inputs to the assessment of counterparty risk. Although automated risk rating processes are increasingly in use, for the larger facilities ultimate responsibility for setting risk grades rests with the final approving executive in each case. Risk grades are reviewed frequently and amendments, where necessary, are implemented promptly.

The HSBC Group's credit risk limits to counterparties in the financial and government sectors are managed centrally to optimise the use of credit availability and to avoid excessive risk concentration. Cross-border risk is controlled through the imposition of country limits, which are determined by taking into account economic and political factors, and local business knowledge, with sub-limits by maturity and type of business. Transactions with counterparties in higher risk countries are considered on a case-by-case basis.

Within the overall framework of the HSBC Group policy, the bank has an established risk management process encompassing credit approvals, the control of exposures (including those to borrowers in financial difficulty), credit policy direction to business units and the monitoring and reporting of exposures both on an individual and a portfolio basis. Local management is responsible for the quality of its credit portfolios and follows a credit process involving delegated approval authorities and credit procedures, the objective of which is to build and maintain risk assets of high quality. Regular reviews are undertaken to assess and evaluate levels of risk concentration, including those to individual industry sectors and products.

Special attention is paid to the management of problem loans. Where deemed appropriate, specialist units are established to provide intensive management and control to maximise recoveries of doubtful debts.

#### Maximum exposure to credit risk

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

#### Collateral and other credit enhancements

##### Loans and advances

Where appropriate, the bank is required to implement guidelines on the acceptability of specific classes of collateral or credit risk mitigation, and determine valuation parameters. Such parameters are expected to be conservative, reviewed regularly and be supported by empirical evidence. Security structures and legal covenants are subject to regular review to ensure that they continue to fulfil their intended purpose and remain in line with local market practice. While collateral is an important mitigant to credit risk, it is the HSBC Group's policy to establish that loans are within the customer's capacity to repay rather than to over rely on security. In certain cases, depending on the customer's standing and the type of product, facilities may be unsecured. The principal collateral types are as follows:

- in the personal sector, mortgages over residential properties.
- in the commercial and industrial sector, charges over business assets such as premises, stock and debtors.
- in the commercial real estate sector, charges over the properties being financed.
- in the financial sector, charges over financial instruments such as debt securities and equities in support of trading facilities.

##### Other securities

Collateral held as security for financial assets other than loans and advances is determined by the structure of the instrument. Debt securities, treasury and other eligible bills are generally unsecured with the exception of asset backed securities and similar instruments, which are secured by pools of financial assets.

#### Concentrations of exposure

The group provides a diverse range of financial services both in the Middle East and internationally. As a result, its portfolio of financial instruments with credit risk is highly diversified with no exposures to individual industries or economic groupings totalling more than 10 per cent of consolidated total assets, except as follows:

- the majority of the bank's exposure to credit risk is concentrated in the Middle East. Within the Middle East, the bank's credit risk is diversified over a wide range of industrial and economic groupings; and
- the bank's position as part of a major international banking group means, that it has a significant concentration of exposure to banking counterparties. The majority of credit risk to the banking industry at 31 December 2006 and 31 December 2005 was concentrated in mainland Europe and the Middle East.
- There are no special collateral requirements relating to industrial concentrations, with the exception of exposures to the property sector. The majority of exposures to the property and construction industry and the residential mortgage market are secured on the underlying property.

#### Credit quality

##### Loans and advances

	At 31 December 2006		At 31 December 2005	
	Loans and advances to customers US\$000	Loans and advances to banks US\$000	Loans and advances to customers US\$000	Loans and advances to banks US\$000
Gross loans and advances:				
— neither past due nor impaired	13,501,171	7,370,745	11,335,798	4,838,657
— impaired	337,285	3,272	294,322	7,222
	<b>13,838,456</b>	<b>7,374,017</b>	<b>11,630,120</b>	<b>4,845,879</b>

### 30 Risk management (continued)

#### Distribution of loans and advances neither past due nor impaired

The credit quality of the portfolio of loans and advances that were neither past due nor impaired at 31 December 2006 can be assessed by reference to HSBC's standard credit grading system. The following information is based on that system:

	<u>At 31 December 2006</u>		<u>At 31 December 2005</u>	
	<u>Loans and advances to customers</u>	<u>Loans and advances to banks</u>	Loans and advances to customers	Loans and advances to banks
	US\$000	US\$000	US\$000	US\$000
Grade 1 — low risk	1,554,257	5,138,355	1,821,748	3,077,034
Grade 2 — satisfactory risk	4,351,856	1,846,715	3,187,205	1,474,001
Grade 3 — fair risk	7,091,617	339,246	5,808,119	236,371
Grade 4 — watch list	415,314	46,429	445,895	51,251
Grade 5 — sub-standard but not impaired	88,127	—	72,831	—
	<u>13,501,171</u>	<u>7,370,745</u>	<u>11,335,798</u>	<u>4,838,657</u>

Grades 1 and 2 represent corporate facilities demonstrating financial condition, risk factors and capacity to repay that are good to excellent, residential mortgages with low to moderate loan to values ratios, and other retail accounts which are not impaired and are maintained within product guidelines.

Grade 3 represents satisfactory risk and includes corporate facilities that require closer monitoring, mortgages with higher loan to value ratios than grades 1 and 2, all non-impaired credit card exposures, and other retail exposures which operate outside product guidelines without being impaired.

Grade 4 and 5 represent corporate facilities that require various degrees of special attention and all retail exposures that are progressively between 30 and 90 days past due.

Grade 6 and 7 indicate impaired status including all retail accounts that are progressively more than 90 days past due.

#### Loans and advances to customers and to banks - net total credit risk

Loans and advances against which the group had legally enforceable rights to offset with financial liabilities at 31 December 2006 were as follows:

	<u>At 31 December 2006</u>	<u>At 31 December 2005</u>
	<u>Book Value and Net total credit risk<sup>1</sup></u>	<u>Book Value and Net total credit risk<sup>1</sup></u>
	US\$000	US\$000
Loans and advances to customers	13,614,744	11,629,206
Loans and advances to banks	6,716,697	4,330,913
	<u>20,331,441</u>	<u>15,960,119</u>

1 Excluding the value of any collateral or security held

	<u>2,758,618</u>	<u>1,714,245</u>

1 Excluding the value of any collateral or security held.

#### Impairment assessment

It is HSBC's policy that each operating company makes allowance for impaired loans promptly when required and on a consistent basis in accordance with established HSBC Group guidelines.

HSBC's rating process for credit facilities extended by members of the HSBC Group is designed to highlight exposures requiring greater management attention based on a higher probability of default and potential loss. Management particularly focuses on facilities to those borrowers and portfolio segments classified below satisfactory grades. Amendments to risk grades, where necessary, are required to be undertaken promptly. Management also regularly evaluates the adequacy of the established allowances for impaired loans by conducting a detailed review of the loan portfolio, comparing performance and delinquency statistics with historical trends and assessing the impact of current economic conditions.

Two types of impairment allowance are in place: individually assessed and collectively assessed. These are discussed in Note 2.

HSBC Group policy requires a review of the level of impairment allowances on individual facilities that are above materiality thresholds at least half-yearly, and more regularly where individual circumstances require. This will normally include a review of collateral held (including re-confirmation of its enforceability) and an assessment of actual and anticipated receipts. For significant commercial and corporate debts, specialised loan 'work-out' teams with experience in insolvency and specific market sectors are used. This expertise enables likely losses on significant individual exposures to be assessed more accurately. Reversals on individually calculated impairment allowances are recognised whenever the HSBC Group has reasonable objective evidence that the established estimate of loss has been reduced.

Portfolio allowances are generally reassessed monthly and charges for new allowances, or releases of existing allowances, are calculated for each separately identified portfolio.

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

In relevant cases, impairment allowances will include an element in respect of cross-border exposures to countries assessed by management to be vulnerable to foreign currency payment restrictions. This assessment includes analysis of both economic and political factors existing at the time. Economic factors include the level of external indebtedness, the debt service burden and access to external sources of funds to meet the debtor country's financing requirements. Political factors taken into account include the stability of the country and its government, threats to security and the quality and independence of the legal system.

#### Non-performing loans

For individually assessed accounts, loans are designated as non-performing as soon as there is objective evidence that an impairment loss has been incurred. Objective evidence of impairment includes observable data such as when contractual payments of principal or interest are 90 days overdue. Portfolios of homogeneous loans are designated as non-performing if facilities are 90 days or more overdue.

#### Charge-offs

Loans (and the related impairment allowances) are normally charged off, either partially or in full, when there is no realistic prospect of recovery of these amounts and when the proceeds from the realisation of security have been received. Unsecured consumer facilities are normally charged off between 150 and 210 days overdue. There are no cases where the charge-off period exceeds 360 days except where certain consumer finance accounts are still deemed collectible beyond this point. In the case of bankruptcy, charge-off can occur earlier.

#### Impaired loans

##### Individually impaired loans by industry sector

### 30 Risk management (continued)

#### Impairment allowances

When impairment losses occur, HSBC reduces the carrying amount of loans and advances and held-to-maturity financial investments through the use of an allowance account. When impairment of available-for-sale financial assets occurs, the carrying amount of the asset is reduced directly.

#### Movement in allowance accounts for total loans and advances

**Collateral and other credit enhancements obtained**

The group has assets obtained by taking control of collateral accepted as security, or through other credit enhancements amounting to US\$1,990 thousand (2005: US\$2,394 thousand) as outlined in Note 19. No additional assets were obtained during 2006 or 2005.

Procedures for the disposal of assets not readily convertible into cash are established at operating company level, and depend on the nature of the asset concerned.

**Renegotiated loans**

Restructuring activity is designed to manage customer relationships, maximise collection opportunities and avoid foreclosure or repossession, if possible. Following restructuring, an overdue consumer account will normally be reset from delinquent to current status. Restructuring policies and practices are based on indicators or criteria which, in the judgement of local management, evidence the probability that payment will continue. These policies are reviewed and their application varies depending upon the nature of the market, the product and the availability of empirically based data. Where empirical evidence indicates an increased propensity to default on restructured accounts, the use of roll rate methodologies for the calculation of impairment allowances results in the increased default propensity being reflected in impairment allowances.

**Renegotiated loans that would otherwise be past due or impaired**

**(b) Liquidity and funding management**

The objective of HSBC's Group liquidity and funding management is to ensure that all foreseeable funding commitments and deposit withdrawals can be met when due, and that wholesale market access is co-ordinated and disciplined. To this end, the HSBC Group seeks to actively support a diversified and stable funding base comprising core retail and corporate customer deposits and institutional balances, augmented by wholesale funding diversified by currency and maturity portfolios of highly liquid assets, in order to be able to respond

### 30 Risk management (continued)

quickly and smoothly to unforeseen liquidity requirements.

The management of liquidity and funding is primarily carried out locally in the operating companies of the HSBC Group in accordance with practice and limits set by the group Risk Management Meeting. These limits vary by local financial unit to take account of the depth and liquidity of the market in which the entity operates. It is the HSBC Group's general policy that each banking entity should be self-sufficient with regard to funding its own operations. Exceptions are permitted to facilitate the efficient funding of certain short-term treasury requirements and start-up operations or branches which do not have access to local deposit markets, all of which are funded under strict internal and regulatory guidelines and limits from the HSBC Group's largest banking operations. These internal and regulatory limits and guidelines serve to place formal limitations on the transfer of resources between group entities and are necessary to reflect the broad range of currencies, markets and time zones within which the HSBC Group operates.

The Group's policy is to require operating entities to maintain a strong liquidity position and to manage the liquidity profile of their assets, liabilities and commitments so that cash flows are appropriately balanced and all funding obligations are met when due.

The Group's liquidity and funding management process includes:

- projecting cash flows by major currency and considering the level of liquid assets necessary in relation thereto;
- monitoring balance sheet liquidity ratios against internal and regulatory requirements;
- maintaining a diverse range of funding sources with adequate back-up facilities;
- managing the concentration and profile of debt maturities;
- maintaining debt financing plans;
- monitoring depositor concentration in order to avoid undue reliance on large individual depositors and ensure a satisfactory overall funding mix; and
- maintaining liquidity and funding contingency plans. These plans identify early indicators of stress conditions and describe actions to be taken in the event of difficulties arising from systemic or other crises while minimising adverse long-term implications for the business.

#### (c) Primary sources of funding

Current accounts and savings deposits payable on demand or at short notice form a significant part of the group's funding. The group places considerable importance on the stability of these deposits.

The group accesses professional markets in order to provide funding for non-banking subsidiaries that do not accept deposits, to maintain a presence in local money markets and to optimise the funding of asset maturities not naturally matched by core deposit funding.

Of total liabilities of US\$23,417,222 thousand at 31 December 2006, funding from customers amounted to US\$17,581,720 thousand, of which US\$17,314,404 thousand was contractually repayable within one year. However, although the contractual repayments of many customer accounts are on demand or at short notice, in practice short-term deposit balances remain stable as inflows and outflows broadly match.

An analysis of cash flows payable by the group under financial liabilities by remaining contractual maturities at the balance sheet date is included in Note 25.

Liabilities in trading portfolios have not been analysed by contractual maturity because trading assets and liabilities are typically held for short periods of time.

Assets available to meet these liabilities, and to cover outstanding commitments to lend (US\$13,387,286 thousand), included cash, central bank balances, items in the course of collection and treasury and other bills (US\$874,180 thousand); loans to banks (US\$7,373,902 thousand, including US\$7,309,815 thousand repayable within one year); and loans to customers (US\$13,616,602 thousand, including US\$9,320,216 thousand repayable within one year). In the normal course of business, a proportion of customer loans contractually repayable within one year will be extended.

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

The group would meet unexpected net cash outflows by selling securities and accessing additional funding sources such as interbank or asset-backed markets.

A key measure used by the group for managing liquidity risk is the ratio of net liquid assets to customer liabilities. Generally, liquid assets comprise cash balances, short-term interbank deposits and highly rated debt securities available for immediate sale and for which a deep and liquid market exists. Net liquid assets are liquid assets less all wholesale market funds, and all funds provided by customers deemed to be professional, maturing in the next 30 days. The definition of a professional customer takes account of the size of the customer's total deposits.

Minimum liquidity ratio limits are set for each operating entity. Limits reflect the local market place, the diversity of funding sources available, and the concentration risk of large depositors.

#### (d) Market risk management

The objective of the group's market risk management is to manage and control market risk exposures in order to optimise return on risk while maintaining a market profile consistent with the group's status as a premier provider of financial products and services.

Market risk is the risk that movements in market risk factors, including foreign exchange rates, interest rates, credit spreads and equity and commodity prices will reduce the group's income or the value of its portfolios.

Each operating entity is required to assess the market risks which arise on each product in its business and to transfer these risks to either its local Global Markets unit for management, or to separate books managed under the auspices of the local Asset and Liability Management Committee ('ALCO'). The aim is to ensure that all market risks are consolidated within operations which have the necessary skills, tools, management and governance to professionally manage such risks.

#### Value at risk ('VAR')

One of the principal tools used by HSBC to monitor and limit market risk exposure is VAR. VAR is a technique that estimates the potential losses that could occur on risk positions as a result of movements in market rates and prices over a specified time horizon and to a given level of confidence (for HSBC, 99 per cent). HSBC calculates VAR daily. The VAR model used by HSBC is predominantly based on historical simulation. The historical simulation model derives plausible future scenarios from historical market rates time series, taking account of inter-relationships between different markets and rates, for example between interest rates and foreign exchange rates. Potential movements in market prices are calculated with reference to market data from the last two years. HSBC has changed the assumed holding period from a 10-day period to a 1-day period as this reflects the way the risk positions are managed. Comparative VAR numbers have been re-stated to reflect this change.

Although a valuable guide to risk, VAR should always be viewed in the context of its limitations. For example:

- the use of historic data as a proxy for estimating future events may not encompass all potential events, particularly those which are extreme in nature;
- the use of a 1-day holding period assumes that all positions can be liquidated or hedged in 1 day. This may not fully reflect the market risk arising from times of severe illiquidity, when a 1-day holding period may be insufficient to liquidate or hedge all positions fully;
- the use of a 99 per cent confidence level, by definition, does not take into account losses that might occur beyond this level of confidence; and
- VAR is calculated on the basis of exposures outstanding at the close of business and therefore does not necessarily reflect intra-day exposures.

HSBC recognises these limitations by augmenting its VAR limits with other position and sensitivity limit structures. Additionally, HSBC applies a wide range of stress testing, both on individual portfolios and on the Group's consolidated positions. HSBC's stress-testing regime provides senior management with an assessment of

### 30 Risk management (continued)

the financial impact of identified extreme events on the market risk exposures of HSBC.

The VAR, both trading and non-trading, for Global Markets was as follows:

<b>Total</b>	<b>US\$000</b>
<b>At 31 December 2006</b>	<b>1,462</b>
At 31 December 2005	2,535

	<b>Average</b>	<b>Minimum</b>	<b>Maximum</b>
	<b>US\$000</b>	<b>US\$000</b>	<b>US\$000</b>
<b>2006</b>	<b>2,073</b>	<b>1,086</b>	<b>3,001</b>
2005	2,438	2,010	2,767

The daily revenue earned from market risk-related treasury activities includes net interest income and funding related to dealing positions. The histogram below illustrates the frequency of daily revenue arising from all Global Markets' business and other trading activities.

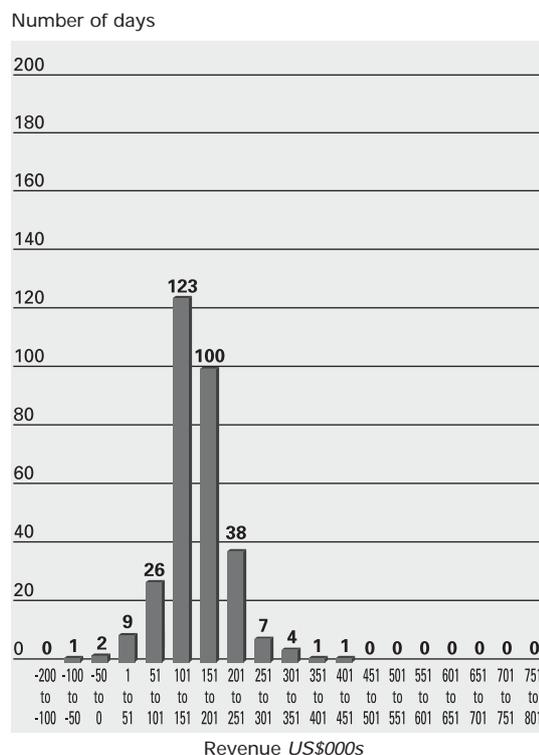

The average daily revenue earned from Global Markets' business and other trading activities in 2006, including accrual book net interest income and funding of dealing positions, was US\$83 thousand compared with US\$152 thousand in 2005. The standard deviation of these daily revenues was US\$48 thousand compared with US\$58 thousand in 2005. The standard deviation measures the variation of daily revenues about the mean value of those revenues.

An analysis of the frequency distribution of daily revenues shows that there were 7 days with negative revenues during 2006 compared with 3 days in 2005. The most frequent result was a daily revenue of between US\$50 thousand and US\$99 thousand, with 180 occurrences. "

**Daily distribution of market risk revenues in 2005**  
HSBC Bank Middle East Limited Treasury

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

#### Fair value and price verification control

Where certain financial instruments are carried on the group's balance sheet at fair values, it is the group policy that the valuation and the related price verification processes are subject to independent testing across the group. Financial instruments which are accounted for on a fair value basis include assets held in the trading portfolio, financial instruments designated at fair value, obligations related to securities sold short, all derivative financial instruments and available for sale securities.

The determination of fair values is therefore a significant element in the reporting of the group's Global Markets activities.

The responsibility for the determination of accounting policies and procedures governing valuation and validation ultimately rests with the HSBC Group Finance and the Corporate, Investment Banking and Markets Finance functions, which report to the HSBC Group Finance Director. All significant valuation policies, and any changes thereto, must be approved by senior finance management. HSBC's governance of financial reporting requires that:

Financial Control departments across the Group are independent of the risk-taking businesses, with the Finance functions having ultimate responsibility for the determination of fair values included in the financial statements, and for ensuring that the Group's policies and relevant accounting standards are adhered to. Senior management are required to assess the resourcing and expertise of Finance functions within the group on a regular basis to ensure that the group's financial control and price verification processes are properly staffed to support the required control infrastructure.

#### Trading

Market risk in trading portfolios is monitored and controlled at both portfolio and position levels using a complementary set of techniques, such as VAR and present value of a basis point, together with stress and sensitivity testing and concentration limits. These techniques quantify the impact on capital of defined market movements

Other controls include restricting individual operations to trading within a list of permissible instruments authorised for each site by Traded Markets Development and Risk, and enforcing rigorous new product approval procedures. In particular, trading in the more complex derivative products is concentrated in offices with appropriate levels of product expertise and robust control systems.

HSBC's policy on hedging is to manage economic risk in the most appropriate way without regard as to whether hedge accounting is available, within limits regarding the potential volatility of reported earnings. Trading VAR is further analysed below by risk type:

#### Total trading VAR by risk type

	Foreign exchange US\$000	Interest rate trading US\$000	Total trading US\$000

2005	284	687	850

### 30 Risk management (continued)

#### Non-trading

The principal objective of market risk management of non-trading portfolios is to optimise net interest income.

Market risk in non-trading portfolios arises principally from mismatches between the future yield on assets and their funding cost as a result of interest rate changes. Analysis of this risk is complicated by having to make assumptions on optionality in certain product areas, for example, mortgage prepayments, and from behavioural assumptions regarding the economic duration of liabilities which are contractually repayable on demand, for example, current accounts. This prospective change in future net interest income from non-trading portfolios will be reflected in the current realisable value of these positions should they be sold or closed prior to maturity. In order to manage this risk optimally, market risk in non-trading portfolios is transferred to Global Markets or to separate books managed under the auspices of the local ALCO.

The transfer of market risk to trading books managed by Global Markets or ALCO is usually achieved by a series of internal deals between the business units and these trading books. When the behavioural characteristics of a product differ from its contractual characteristics, the behavioural characteristics are assessed to determine the true underlying interest rate risk. Local ALCOs regularly monitor all such behavioural assumptions and interest rate risk positions, to ensure they comply with interest rate risk limits established by the HSBC Group Management Board.

As noted above, in certain cases, the non-linear characteristics of products cannot be adequately captured by the risk transfer process. For example, both the flow from customer deposit accounts to more attractive investment products and the precise repayment levels of mortgages will vary at different interest rate levels. In such circumstances simulation modelling is used to identify the impact of varying scenarios on valuations and net interest income.

Once market risk has been consolidated in Global Markets or ALCO-managed books, the net exposure is typically managed through the use of interest rate swaps within agreed limits.

#### Net interest income

Future net interest income is affected by movements in interest rates. A principal part of the group's management of market risk in non-trading portfolios is to monitor the sensitivity of projected net interest income under varying interest rate scenarios (simulation modelling). The group aims, through its management of market risk in non-trading portfolios, to mitigate the impact of prospective interest rate movements which could reduce future net interest income, whilst balancing the cost of such hedging activities on the current net revenue stream. For simulation modelling, businesses use a combination of scenarios relevant to local businesses and local markets as well as standard scenarios required to be used across the group. The standard scenarios are consolidated to illustrate the combined pro forma impact on the group's consolidated portfolio valuations and net interest income.

The impact on future net interest income of a 25 basis points parallel fall or rise in all yield curves worldwide in each quarter during the 12 month period from 1 January 2006 would decrease or increase net interest income by US\$9,805 thousand (\$6,707 thousand from 1 January 2006).

The figures represent the effect of the pro forma movements in net interest income based on the projected yield curve scenarios and the group's current interest rate risk profile. This effect, however, does not incorporate actions that could be taken by Global Markets or in the business units to mitigate the impact of this interest rate risk. In reality, Global Markets would seek to proactively change the interest rate risk profile to minimise losses and optimise net revenues. The projections above also assume that interest rates of all maturities move by the same amount and, therefore, do not reflect the potential impact on net interest income of some rates changing while others remain unchanged. The projections also make other simplifying assumptions, including that all positions run to maturity.

The group's core exposure to changes in its net interest income arising from movements in interest rates falls into two areas: core deposit franchises and Global Markets.

— Core deposit franchises: these are exposed to changes in the value of the deposits raised and spreads against

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

wholesale funds; in a low interest rate environment, the value of core deposits increases as interest rates rise and decreases as interest rates fall. This risk is, however, asymmetrical in a very low interest rate environment as there is limited room to lower deposit pricing in the event of interest rate reductions.

- Global Markets: the residual interest rate risk is managed within Global Markets. This reflects the group's policy of transferring all interest rate risk, other than structural risk, to Global Markets to be managed within defined limits and with flexibility as to the instruments used.

The major drivers of the changes shown in the projected effect of interest rate moves are set out below.

- Reinvestment rates - for the purpose of the sensitivity projections, it has been assumed maturing interest earning assets and interest bearing liabilities replenish at the prevailing market rates and on similar terms.
- The projected movements from rate changes are computed assuming simultaneous change in customer rates.
- Economic environment - the projected effect of interest rate moves assumes no significant changes in the existing economic environment, interest rate and exchange rate policies of the regions where the group operates.

It can be seen from the above that projecting the movement in net interest income from prospective changes in interest rates is a complex interaction of structural and managed exposures. In a rising rate environment, the most critical exposures are those managed within Global Markets.

Additionally, the group considers a principal risk to future net interest income to be a general flattening of yield curves at a low level of interest rates, as this reduces the value of the deposit franchise and limits the opportunities within Global Markets.

Following the adoption of IFRS, the group monitors the sensitivity of reserves to interest rate movements on a monthly basis by assessing the expected reduction in valuation of available-for-sale portfolios and cashflow hedges due to parallel movements of plus or minus 100bps in all yield curves. The table below describes the sensitivity to these movements at 31 December 2006 and the maximum and minimum month figures during the year then ended:

	<b>At 31 December 2006 US\$000</b>	<b>Maximum impact US\$000</b>	<b>Minimum impact US\$000</b>
+ 100 basis point parallel move all in yield curves As a percentage of shareholders funds at 31 December 2006	2,758 0.17 %	4,890 0.30 %	(3,682) (0.22)%
- 100 basis point parallel move all in yield curves As a percentage of shareholders funds at 31 December 2006	(2,758) (0.17) %	3,682 0.22 %	(4,890) (0.30)%

#### Structural foreign exchange exposures

Structural foreign exchange exposures represent net investments in subsidiaries, branches or associated undertakings, the functional currencies of which are currencies other than the US dollar or Gulf currencies linked to the US dollar.

Revaluation gains and losses on structural exposures are recorded in the statement of total consolidated recognised income and expenses. The main operating (or functional) currencies of the group are UAE dirhams and other Gulf currencies linked to the US dollar.

The group's structural foreign currency exposures are managed with the primary objective of ensuring, where practical, that the group's tier 1 capital ratio is protected from the effect of changes in exchange rates. This is usually achieved by holding qualifying tier 1 capital broadly in proportion to the corresponding foreign-currency-denominated risk-weighted assets. The group considers hedging structural foreign currency exposures only in limited circumstances, to protect the tier 1 capital ratio or the US dollar value of capital invested. Such hedging would be undertaken using forward foreign exchange contracts or by financing with borrowings in the

### **30 Risk management** *(continued)*

same currencies as the functional currencies involved.

As the group is generally able to balance adequately foreign currency tier 1 capital with foreign currency risk-weighted assets, the group's foreign currency structural exposures are usually unhedged, including exposures due to foreign-currency-denominated profits arising during the year.

#### **(e) Operational risk management**

Operational risk is the risk of loss arising from fraud, unauthorised activities, error, omission, inefficiency, systems failure or external events. It is inherent to every business organisation and covers a wide spectrum of issues.

The group manages this risk through a controls-based environment in which processes are documented, authorisation is independent and transactions are reconciled and monitored. This is supported by an independent programme of periodic reviews undertaken by Internal Audit, and by monitoring external operational risk events, which ensure that the group stays in line with best practice and takes account of lessons learned from publicised operational failures within the financial services industry.

The HSBC Group has codified its operational risk management process by issuing a high level standard, supplemented by more detailed formal guidance issued in January 2005. This explains how the HSBC Group manages operational risk by identifying, assessing, monitoring, controlling and mitigating the risk, rectifying operational risk events, and implementing any additional procedures required for compliance with local regulatory requirements. The processes undertaken to manage operational risk are determined by reference to the scale and nature of each HSBC Group operation. The HSBC Group standard covers the following:

- Operational risk management responsibility is assigned at senior management level within the business operation;
- Information systems are used to record the identification and assessment of operational risks and generate appropriate, regular management reporting;
- Operational risks are identified by assessments covering operational risks facing each business and risks inherent in processes, activities and products. Risk assessment incorporates a regular review of identified risks to monitor significant changes;
- Operational risk loss data is collected and reported to senior management. Aggregate operational risk losses are recorded and details of incidents above a materiality threshold are reported to the Group Audit Committee and the Risk Management Meeting; and
- Risk mitigation, including insurance, is considered where this is cost-effective.

Local management is responsible for implementing the HSBC Group standard on operational risk throughout their operations and, where deficiencies are evident, rectifying them within a reasonable timeframe.

The group maintains and tests contingency facilities to support operations in the event of disasters. Additional reviews and tests are conducted in the event that any HSBC office is affected by a business disruption event to incorporate lessons learned in the operational recovery from those circumstances.

#### **(f) Capital management**

The Jersey Financial Services Commission (JFSC) supervises the group on a consolidated basis and, as such, receives information on the capital adequacy of, and sets capital requirements for, the group as a whole. Individual branches and subsidiaries are directly regulated by their local banking supervisors, who set and monitor their capital adequacy requirements.

Under the Banking Business (Jersey) Law 1991, the JFSC requires each bank and banking group to maintain a ratio of total capital to risk-weighted assets taking into account both balance sheet assets and off-balance sheet transactions.

## Notes on the Financial Statements (continued)

### 30 Risk management (continued)

The group's capital is divided into two tiers:

- Tier 1 capital comprises shareholders' funds and minority interests in tier 1 capital, after adjusting for items reflected in shareholders' funds which are treated differently for the purposes of capital adequacy.
- Tier 2 capital comprises qualifying non-equity preference share capital, collective impairment allowances (previously, general provisions) and reserves arising from the revaluation of properties.

Various limits are applied to elements of the capital base. Qualifying tier 2 capital cannot exceed tier 1 capital, and qualifying term non-equity preference share capital may not exceed 50 per cent of tier 1 capital.

There are also limitations on the amount of collective impairment allowances which may be included as part of tier 2 capital. From the total of tier 1 and tier 2 capital are deducted the net asset value of investments in associates and the book value of investments in the capital of banks.

Risk-weighted assets are measured by means of a hierarchy of risk weightings classified according to the nature of each asset and counterparty, taking into account any eligible collateral or guarantees. Off-balance-sheet items giving rise to credit, foreign exchange or interest rate risk are assigned weights appropriate to the category of the counterparty, taking into account any eligible collateral or guarantees.

Following the implementation of IFRS, there will be changes to the measurement of banks' capital adequacy in a number of ways. The most significant of these changes for the group is that under IFRS, dividends are not recognised on the balance sheet until they are declared. This gives rise to an increase in shareholders' funds at the reporting date compared with the previous accounting, which is reversed when the relevant dividend is subsequently declared. Banks reflect the benefit of this increase in their regulatory capital until the dividend declaration, in line with the accounting treatment.

During 2006, the group complied with the Jersey Financial Services Commission's ("JFSC") capital adequacy requirements. During 2005, the group complied with the JFSC's capital adequacy requirements, with one exception. A short-term substantial long US dollar position arose in the UAE as a result of demand for UAE dirhams required by foreign investors for subscription in a major regional IPO in which the group was a receiving bank. Such positions are not risk-weighted in the UAE, but are risk weighted under the JFSC's regulations. The UAE dirhams/US\$ peg means that such positions have minimal economic risk, however this position caused the JFSC's regulatory minimum capital adequacy ratio to be temporarily breached. This breach was taken very seriously and after advising the JFSC, consequential capital injections totalling US\$200 million were made and enhanced monitoring and changes to internal operational guidelines were agreed and implemented to address the deficiencies which caused this exception.

### 31 Contingent liabilities and contractual commitments

#### Contingent liabilities and commitments

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000
Contract amounts		
Contingent liabilities:		
Guarantees and assets pledged as collateral security:		
— guarantees and irrevocable letters of credit	<b>6,160,989</b>	4,251,725
	<b><u>6,160,989</u></b>	<u>4,251,725</u>
Commitments:		
Documentary credits and short-term trade-related transactions	<b>1,132,190</b>	925,191
Undrawn formal standby facilities, credit lines and other commitments to lend:		
— one year and under	<b>11,956,464</b>	11,118,332
— over one year	<b>298,632</b>	653,783
	<b><u>13,387,286</u></b>	<u>12,697,306</u>

### 31 Contingent liabilities and contractual commitments (continued)

The above table discloses the nominal principal amounts of off-balance sheet transactions.

Contingent liabilities and commitments are credit-related instruments which include letters of credit, guarantees and commitments to extend credit. Contractual amounts represent the amounts at risk should contracts be fully drawn upon and clients default. Since a significant portion of guarantees and commitments are expected to expire without being drawn upon, the total of the contractual amounts is not representative of future liquidity requirements.

Included in the above are the following liabilities on account of other members of the HSBC Group:

	<b>2006</b>	2005
	<b>US\$000</b>	US\$000
Guarantees and assets pledged by the bank as collateral security	<b>623,428</b>	420,295
Documentary credits and short-term trade-related transactions	<b>7,080</b>	3,301
	<b><u>630,508</u></b>	<u>423,596</u>

#### Guarantees

The group provides guarantees and similar undertakings on behalf of both third party customers and other entities within the group. These guarantees are generally provided in the normal course of the group's banking business. The principal types of guarantees provided, and the maximum potential amount of future payments which the group could be required to make at 31 December 2006 were as follows:

Guarantee type	<u>At 31 December 2006</u>		<u>At 31 December 2005</u>	
	Guarantees in favour of third parties US\$000	Guarantees by the group in favour of other HSBC group entities US\$000	Guarantees in favour of third parties US\$000	Guarantees by the group in favour of other HSBC group entities US\$000
Financial guarantees <sup>1</sup>	<b>371,239</b>	<b>225,087</b>	318,081	108,120
Standby letters of credit which are financial guarantees <sup>2</sup>	<b>666,113</b>	—	350,091	—
Other direct credit substitutes <sup>3</sup>	<b>242,546</b>	—	119,945	—
Performance bonds <sup>4</sup>	<b>2,450,451</b>	<b>236,836</b>	1,603,520	176,717
Bid bonds <sup>4</sup>	<b>248,165</b>	<b>27,674</b>	253,671	70,985
Other transaction-related guarantees <sup>4</sup>	<b>1,559,047</b>	<b>133,832</b>	1,186,122	64,473
Total	<b><u>5,537,561</u></b>	<b><u>623,428</u></b>	<u>3,831,430</u>	<u>420,295</u>

1 *Financial guarantees include undertakings to fulfill the obligations of customers or group entities should the obligated party fail to do so. Intra-group financial guarantees include a guarantee of a capital nature issued by the group to a group entity for inclusion as capital support by the latter's regulator.*

2 *Standby letters of credit which are financial guarantees are irrevocable obligations on the part of the bank to pay a third party when a customer fails to meet a commitment.*

3 *Other direct credit substitutes include re-insurance letters of credit and trade-related letters of credit issued without provision for the issuing entity to retain title to the underlying shipment.*

4 *Performance bonds, bid bonds and other transaction-related guarantees are undertakings by which the requirement to make payment under the guarantee depends on the outcome of a future event which is unconnected to the creditworthiness of the customer.*

## Notes on the Financial Statements (continued)

**31 Contingent liabilities and contractual commitments** (continued)

The amounts disclosed in the above table reflect the group's maximum exposure under a large number of individual guarantee undertakings. The risks and exposures arising from guarantees are captured and managed in accordance with the group's overall credit risk management policies and procedures.

Approximately 77% per cent of the above guarantees have a term of less than one year. Guarantees with terms of more than one year are subject to the group's annual credit review process.

When the group gives a guarantee on behalf of a customer, it retains the right to recover from that customer amounts paid under the guarantee.

**Provisions in respect of the group's obligations under outstanding guarantees**

	<b>2006</b> <b>US\$000</b>	2005 US\$000
Other items	<b>308</b>	(800)
	<b><u>308</u></b>	<u>(800)</u>

The group had commitments to purchase from a number of suppliers within one year, land and buildings and other fixed assets for a value of US\$23,658 thousand at 31 December 2006 (2005: US\$8,018 thousand).

## Associates

The group and its operations are contingently liable with respect to lawsuits and other matters that arise in the normal course of business. Management is of the opinion that the eventual outcome of the legal and financial liability is not expected to materially affect the group's financial position and operations.

**32 Lease commitments**

Finance lease commitments	<b>2006</b>			2005		
	<b>Total future minimum payments US\$000</b>	<b>Interest charges US\$000</b>	<b>Present value US\$000</b>	Total future minimum payments US\$000	Interest charges US\$000	Present value US\$000
No later than one year	<b>503</b>	—	<b>503</b>	494	—	494
Later than one year and no later than five years	<b>2,009</b>	—	<b>2,009</b>	2,472	—	2,472

	<b><u>5,845</u></b>	<u>—</u>	<b><u>5,845</u></b>	<u>6,169</u>	<u>—</u>	<u>6,169</u>

## Operating lease commitments

At 31 December 2006, the group was obligated under a number of non-cancellable operating leases for properties, plant and equipment for which the future minimum lease payments extend over a number of years.

	<b>2006</b> <b>US\$000</b>	2005 US\$000
Future minimum lease payments under non-cancellable operating leases were:		
Land and buildings expiring:		
— no later than one year	<b>18,798</b>	17,975
— later than one year and no later than five years	<b>56,260</b>	10,984
— later than five years	<b>70,301</b>	25,031
	<b><u>145,359</u></b>	<u>53,990</u>

### 32 Lease commitments (continued)

In 2006, US\$3,635 thousand (2005: US\$9,752 thousand) was charged to 'General and administrative expenses' in respect of lease agreements related to minimum lease payments.

#### Finance lease receivables

	2006			2005		
	Total future minimum payments US\$000	Unearned finance income US\$000	Present value US\$000	Total future minimum payments US\$000	Unearned finance income US\$000	Present value US\$000
No later than one year	—	—	—	312	—	312
Later than one year and no later than five years	1,724	—	1,724	9,755	—	9,755
Later than five years	16,620	—	16,620	182	—	182
	<b>18,344</b>	<b>—</b>	<b>18,344</b>	<b>10,249</b>	<b>—</b>	<b>10,249</b>

#### Operating lease receivables

	2006 US\$000	2005 US\$000
Future minimum lease payments under non-cancellable operating leases were:		
Land and buildings expiring:		
— no later than one year	<b>118</b>	<b>90</b>

### 33 Litigation

The bank, through a number of its branches, is named in and is defending legal actions in various jurisdictions arising from its normal business. No material adverse impact on the financial position of the group is expected to arise from these proceedings.

### 34 Related party transactions

The ultimate parent company of the group is HSBC Holdings plc, which is incorporated in England.

All transactions were made in the ordinary course of business and on substantially the same terms, including interest rates and security, as for comparable transactions with persons of a similar standing or, where applicable, with other employees. The transactions did not involve more than the normal risk of repayment or present other unfavourable features.

#### (a) Transactions, arrangements and agreements involving Directors and others

The table below sets out transactions which fall to be disclosed under IAS24 'Related Party Disclosures' between the group and the Key Management Personnel and their connected persons or controlled companies.

	2006			2005		
	Number of persons	Highest balance during the year <sup>1</sup> US\$000	Balance at year end <sup>1</sup> US\$000	Number of persons	Highest balance during the year <sup>1</sup> US\$000	Balance at year end <sup>1</sup> US\$000
<b>Key Management Personnel and connected persons and companies controlled by them</b>						
Loans	3	587	568	1	144	144
Credit cards	1	14	7	1	13	13
	<b>4</b>	<b>601</b>	<b>575</b>	<b>2</b>	<b>157</b>	<b>157</b>

1 The disclosure of the year-end balance and the highest balance during the year is considered the most meaningful information to represent transactions during the year.

## Notes on the Financial Statements (continued)

## 32 Lease commitments (continued)

In addition to the disclosures of related party transactions, under IAS24 the group is required to disclose an estimate of the cost of services provided by Key Management Personnel to the group, to whom no remuneration is paid.

	<b>2006</b>		<b>2005</b>	
	<b>US\$000</b>		<b>US\$000</b>
