# **HSBC Purchasing Managers' Index™ Press Release**

Embargoed until: 10:30 (Beijing), 23 August 2012

# HSBC Flash China Manufacturing PMI™

# New export business declines at sharpest rate since March 2009

# **Key points**

- Flash China Manufacturing PMI™ at 47.8 (49.3 in July). 9-month low.
- Flash China Manufacturing Output Index at 47.9 (50.9 in July). 5-month low.

Data collected 13-21 August 2012.

The HSBC Flash China Manufacturing *Purchasing Managers' Index<sup>TM</sup> (PMI<sup>TM</sup>)* is published on a monthly basis approximately one week before final PMI data are released, making the HSBC PMI the earliest available indicator of manufacturing sector operating conditions in China. The estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate indication of the final PMI data.

#### **China Flash Manufacturing PMI™ Summary**

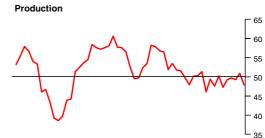

50.0 = no change on previous month (seasonally adjusted)

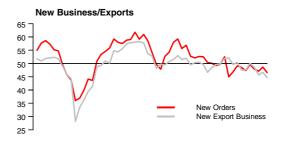

| PMI                       | Contraction, faster rate         |  |
|---------------------------|----------------------------------|--|
| Output                    | Contraction, change of direction |  |
| New Orders                | Contraction, faster rate         |  |
| New Export Orders         | Contraction, faster rate         |  |
| Employment                | Contraction, rate unchanged      |  |
| Backlogs of Work          | Contraction, change of direction |  |
| Output Prices             | Decline, faster rate             |  |
| Input Prices              | Decline, faster rate             |  |
| Stocks of Purchases       | Contraction, faster rate         |  |
| Stocks of Finished Goods  | Expansion, faster rate           |  |
| Quantity of Purchases     | Contraction, faster rate         |  |
| Suppliers' Delivery Times | Lengthening, change of direction |  |

Commenting on the Flash China Manufacturing PMI survey, Hongbin Qu, Chief Economist, China & Co-Head of Asian Economic Research at HSBC said:

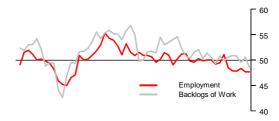

"Falling orders dragged down the August flash PMI to a nine-month low, suggesting Chinese producers are still struggling with strong global headwinds. To achieve the stated policy goal of stabilizing growth and the jobs market, Beijing must step up policy easing to lift infrastructure investment in the coming months."

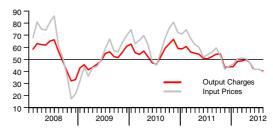

# Employment/Backlogs of Work

#### **Notes to Editors:**

Final August data are published on 3 September 2012.

The HSBC China Report on Manufacturing is based on data compiled from monthly replies to questionnaires sent to purchasing executives in over 420 manufacturing companies. The flash estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate advance indication of the final PMI data.

The average differences between the flash and final PMI index values (final minus flash) since comparisons were first available in January 2008 are as follows (differences in absolute terms provide the better indication of true variation while average differences provide a better indication of any bias):

| Index                                 | Average difference | Average difference in absolute terms |
|---------------------------------------|--------------------|--------------------------------------|
| HSBC China Manufacturing PMI          | 0.0                | 0.5                                  |
| HSBC China Manufacturing Output Index | 0.1                | 0.9                                  |

The panel is stratified by Standard Industrial Classification (SIC) group and company size, based on industry contribution to Chinese GDP. Survey responses reflect the change, if any, in the current month compared to the previous month based on data collected mid-month. For each of the indicators the 'Report' shows the percentage reporting each response, the net difference between the number of higher/better responses and lower/worse responses, and the 'diffusion' index. This index is the sum of the positive responses plus a half of those responding 'the same'.

The *Purchasing Managers' Index<sup>TM</sup> (PMI<sup>TM</sup>)* is a composite index based on five of the individual indexes with the following weights: New Orders - 0.3, Output - 0.25, Employment - 0.2, Suppliers' Delivery Times - 0.15, Stock of Items Purchased - 0.1, with the Delivery Times index inverted so that it moves in a comparable direction.

Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. An index reading above 50 indicates an overall increase in that variable, below 50 an overall decrease.

Markit do not revise underlying survey data after first publication, but seasonal adjustment factors may be revised from time to time as appropriate which will affect the seasonally adjusted data series. Historical data relating to the underlying (unadjusted) numbers, first published seasonally adjusted series and subsequently revised data are available to subscribers from Markit.
