Devouring new skills to stay ahead

HSBC Careers

Yours for the making

**[Clarence]**

I believe knowledge is currency.

The more you learn, the better you're prepared for what's to come.

Ideas and technology only matter when it's there to solve a problem.

Clarence Cheung

Global Head of Business Risk Analytics

Corporate & Institutional Banking

**[Clarence]**

I have always been curious as a child and that curiosity has led me today where I continue to build things.

I enjoy turning an idea into a physical object; one that you can physically touch and share with others.

My career has not followed a conventional path.

I'm not afraid to try new things.

And I've come back to banking now where I lead a team to protect our customers fight financial crime and solve real-world problems.

Financial crime never stays still; so, we have to use new technology to stay ahead of the curve.

HSBC invests heavily in AI, cloud technology, infrastructure, and data to make this work possible.

We have leaders at HSBC who trust and encourage us to find new ways of solving problems using the latest technology allowing me to bring my curiosity to work.

Whether I am 3D printing something to fix a broken part of the house or using AI to fight financial crime, I'm always using technology to solve a problem.

Here I can bring all the parts of who I am the researcher, the builder, the technologist, and the entrepreneur.
