**ANNEX 1**  
**Extracts of the amended Elements to the Summary of the Market Access Base Prospectus**

<b>B.4b</b>	<b>Known trends affecting the Issuer and the industries in which it operates<sup>1</sup>:</b>	<p>UK real Gross Domestic Product ("GDP") growth picked up in the second quarter of 2015, increasing to 0.7 per cent. quarter-on-quarter in the preliminary release (from 0.4 per cent. in the first quarter of 2015). GDP was 2.6 per cent. higher than the same quarter a year earlier. The unemployment rate fell in the early part of this year, but ticked back up to 5.6 per cent. in the three months to May. Wage growth continued to accelerate, though, growing by 3.2 per cent. in the three months to May (compared with the same three months a year earlier), with private sector pay rising by close to 4 per cent. The annual rate of growth of the Consumer Price Index ("CPI") measure of inflation turned briefly negative in April (-0.1 per cent.), but stood at zero in June. After a slowdown in the housing market in the second half of 2014, activity levels appeared to be picking up in 2015. The Bank of England kept the Bank Rate and its Asset Purchase Programme steady at 0.5 per cent. and £375 billion, respectively.</p> <p>UK real GDP is expected to rise by 2.7 per cent. in 2015, a slight slowdown on the 3.0 per cent. growth rate for 2014. Consumer spending remains the key driver of growth, supported by low inflation, high employment and rising real incomes. Headwinds come in the form of fiscal tightening, and uncertainty over the forthcoming EU referendum, which could weigh on investment growth. CPI inflation is expected to rise back towards 1 per cent. towards the end of the year, as the effects from the drop in oil prices fall away, but remain below the Bank of England's 2 per cent. target until at least the end of 2016. Nonetheless, the Issuer expects the Bank of England to start raising the Bank Rate from early 2016, and to cease reinvesting maturing gilts in its QE portfolio.</p> <p>The domestic-led cyclical recovery continued in the eurozone. Real GDP in the region as a whole grew by 0.4 per cent. in the first quarter after 0.3 per cent. in the last quarter of 2014. Spain continued to be the star performer among the 'Big 4' large eurozone countries, with real GDP growth of 0.9 per cent. in the first quarter, but the recovery was more broad based, with Italy also posting positive growth of 0.3 per cent., the highest since 2011. The fall in energy prices has provided a significant boost to real wages, supporting consumption, whilst public consumption has also been supportive to growth also thanks to the electoral cycle in some countries. The ECB's programme of asset purchases has also been positive for confidence, financial markets, bank lending and inflation expectations. It also helped keep the euro on a lower trajectory, which is helping in particular those countries that rely more on prices for their competitiveness, like France and Italy, which saw their exports improve particularly outside the eurozone despite sluggish world trade growth.</p> <p>In the eurozone, sustainable growth depends on the delivery of a broader package of investment measures to support demand and raise productivity, along with greater fiscal and economic policy coordination between member states. The Juncker Plan to support investment is set to start in the second half</p>

		<p>of 2015, but its effect might only be evident in the longer-term and is unlikely to be sufficient to close the investment gap in the eurozone. The Issuer expects real GDP growth of 1.3 per cent. in 2015, moving slightly higher to 1.4 per cent. in 2016 with CPI inflation remaining subdued. The uncertainties concerning Greece will remain for the foreseeable future.</p> <p>The Issuer expects global GDP growth to be 2.4 per cent. in 2015, down from 2.5 per cent. in 2014.</p>
