Group downside Middle East conflict stress scenarios

No significant financial impact experienced to date; modelled downside stress scenarios inform management planning

Global impacts from modelled downside stress scenarios

- ◆ **We have not experienced significant financial impacts from recent events in the Middle East to date, and we are well positioned to manage the current uncertainties from a position of financial strength**
- ◆ We conduct regular internal stress testing to understand the nature of emerging risks, quantify their impact, and inform forward management planning
- ◆ We have modelled a range of **top-down integrated downside stress scenarios*** of increasing severity and duration, with assumptions including:
 - Higher oil prices
 - Rising inflation
 - A material slowdown in GDP
 - Rising unemployment
 - Market disruption
- ◆ **Before management actions**, these stress scenarios could reduce PBT by a mid-to-high single digit % in 2026, across revenue and ECL drivers. In practice, we would expect to take mitigating actions as conditions evolve, consistent with our risk appetite
- ◆ The potential impacts of our modelled downside stress assumptions are uncertain and also dependent on further developments, customer behaviour and activity levels

* In a top-down integrated downside stress scenario, we apply management judgement to simultaneously stress revenue, ECL and balance sheet drivers, and do not reflect responsive mitigating management actions

Customer deposits: additional disclosures (1/2)

- ◆ Incremental disclosures are provided to improve visibility into our low-cost, high-quality deposit base which mainly consist of instant access demand deposits:
 - **Instant access/demand deposits** ('IA/D'): current accounts and savings accounts that can be contractually accessed on demand by the customer with no or limited conditions on withdrawal
 - **Fixed term deposits**: term deposits and instant access / demand deposits where withdrawal is contractually permitted but subject to conditions impacting withdrawal

Alternative Performance Measures

This Presentation contains non-IFRS measures used by management internally that constitute alternative performance measures under European Securities and Markets Authority guidance and non-GAAP financial measures defined in and presented in accordance with SEC rules and regulations (“Alternative Performance Measures”). The primary Alternative Performance Measures we use are presented on a “constant currency” basis which is computed by adjusting comparative period reported results for the effects of foreign currency translation differences, which distort period-on-period comparisons.

Reconciliations between Alternative Performance Measures and the most directly comparable measures under IFRS are provided in our 2025 Form 20-F and the 1Q 2026 Earnings Release when furnished to the SEC, each of which is available at www.hsbc.com.

Information in this Presentation was prepared as at 5 May 2026.
